THE LOT OF THE
COMPUTER WISE

SPECIAL RANGE OF CARTRIDGES FOR THE VIC

The VCR cartridge, fitted in a luxury case, can offer up to 20K RAM (Random Access Memory) and 16K of preprogrammed ROM (Read Only Memory). It is compatible with the various utility chips currently available. You can start with just 4K (VCR 4) for only £24, adding more memory later. Each 2K increment will cost £5, offering the finest quality CMOS RAM or low power NMOS RAM (£4).

The VCS is the Beta name of software houses, in basic mode, it simply provides 8K of extra RAM with three slots for cartridges (including those produced by CBM). In VCS mode, it can read cartridge into RAM and simulates them once they are removed. This allows the programmer to use machine code tools (disassembler, monitor editor, etc.) for analysing the cartridge. Available without RAM (VSC-0) for £24, or with 8K of RAM for £44.

The VEP (Vic Eprom Programmer)* this cartridge can read 2K, 4K or 8K of ROM and program Eproms directly from a master ROM or lapa. The software is already included in the cartridge in addition to a blank Eprom to help start you off. Cased as illustrated for just £18.

In case you have only just heard of us — we are absolute specialists in memory upgrade, providing a wide range of items for the PET, Apple, Video Genie, TRS 80, Acorn and Sinclair Spectrum computers. Please ring us for a free brochure.

INNOVATIVE TRS 80 GENIE SOFTWARE

from the professionals

JUMBO

Fantastic new flying simulation

Occasionally a program comes along of such magnitude that it is hard to describe it, especially when the space allowance in an advertisement. Jumbo is such a program. There have, of course, been flying simulation programs before, but they have all rather fallen into the trap of trying to produce a graphic representation of the ground at some stage or other in the program, thus taking up space and for they have concentrated on the single act of flying. In other words, although one gets the feeling of flying a small aircraft, one is not going anywhere.

Jumbo is a fantastically accurate simulation of flying a Boeing 747. These planes are not small, and are not flown by eye. They are flown by eyes and instruments, and the instrument graphics in this simulation are really first class. As you may know, the primary instrument of an aircraft is the artificial horizon. This is simulated very well, and includes instrument landing approach indicators. Graphic maps of very high quality are produced and it is possible to fly in all of the British Isles including Southern Ireland, and to New York on the Eastern U.S. seaboard. The actual airports are at London, Birmingham, Manchester, Prestwick, Edinburgh, Belfast, Shannon and New York.

The program was written by two authors who combined their joint skills to produce a unique piece of software. The programmer got the feel of performance out of the machine and the pilot the last step of authenticity out of the simulation. Other simulation programs produce of best a similarity towards flying. With Jumbo you really feel that you are behind the controls.

The authors have used a number of gimmicks and programming techniques. For instance, it is possible to switch on an automatic pilot and to jump forward in time in increments of one minute or one hour — otherwise of course a flight from London to New York or vice versa would take some 8 hours to simulate. Whilst in this time skip the various controls are still as they are but fuel consumption and distance to go are taken forward at their correct rate.

A chart is supplied containing various items of data which you will need, including the take-off data for a 747 with various taxi-off weights, flap re-extensions, climb and cruise speeds and descent distances.

Realising that not everybody can fly a 747 and that there is even a large proportion of the population that cannot fly anything, two important items of assistance have been added. First of all is the documentation. This is split into two parts. The second is a manual on flying the 747. In other words, the instructions for running the program. The first part, however, is what amounts to an instruction manual for flying. It assumes that the user knows nothing about aircraft and although we do not purport that it gets anybody up to any sort of standard after it has been assimilated, the reader should have sufficient knowledge of flying and the theory of flight to fly in the program itself. The second featured assistance to the novice pilot is a feature in the program which enables the user to practice landings. When the program is running, if one presses the P key, the aircraft is automatically put 11 miles out from London Airport, approaching an instrument landing.

The controls are pretty well complete, even to drive and wheel brakes. The flying track may be continuously monitored on the map display. Bearing and distance to your intended point of landing are available all the time. The instruments, incidentally, consist of:

Artificial horizon	Altitude	Fuel
Air on indicator	Compass	Elapsed time
Indicated airspeed	Turn indicator	Distance to landing
Power setting	Flap indicator	Rate of climb
Elevators	Altitude	

Six maps may be chosen, as follows:

Scotland, Northern England, Southern England, Ireland, Eastern U.S.A., The whole of the U.K.

Route information and present position are shown on the map displayed. It is very difficult to think of any factor that the authors have overlooked. Even the quite meaningful thinning of the air with increasing height, which greatly affects the elapsed indicator in real life, is taken into consideration. Rather than having a true stall speed, the continuously changing with the flight configuration, the weight, height and power setting, again as it goes in real life.

We like to think that we publish good programs. Jumbo is outstanding. It is available on tape or disk for 16K or 32K memory machines. It is compatible with the Model I and Model III Tandy Video Genie, Ganno I and Genie II machines.

Tape £15.00 + VAT = £17.25
Disk £17.00 + VAT = £19.55

THE "STARWARS OF THE 80's"

NEXT

Tron lives inside a mainframe computer. He is referred to as a "Program" and he fights for the "users".

He has also given his name to the Walt Disney film which is set inside a huge games computer. The film has just opened to rave reviews in the US and will be in London's Odeon Leicester Square Cinema from October 21.

The film is unique in combining real actors, animation and some superb computer graphics and has been tipped as the "Star-Wars of the 80's" by those privileged enough to have seen it.

Our September issue gives two pages and the front cover over to this marvellously imaginative film, which is quite different from the usual Disney offerings.

We look behind the scenes at the graphics men behind the film, a review of the film itself and a rundown on the huge boost it is already giving to the video games and computer games industry, both here and in America.

WHAT'S THE ANTIMATTER?

NEXT

Our Science Fiction author, David Langford is back with another offering. He takes the concept of anti-matter and shows how it can be used in a computer game. And as usual comes up with a luring to illustrate his points.

Have you ever dreamt up your perfect computer game but felt that the programming skills necessary to convert it to your computer were beyond you?

Next month we are offering the perfect solution. In conjunction with Sinclair Research and Pison Computers, we are challenging readers to come up with an original idea for a computer game.

Sinclair are putting up five prizes for the best ideas, but more interesting for you aspiring games writers, is the chance to put your name to a game marketed through Sinclair. More details next issue.

DEFENDER IN ONE "K"

NEXT

On the games front, we have a Mini Defender in 1K for the unexpanded Sinclair ZX81 owners. The ghosts of Pacman are ready to chase those of you with a VIC-20, plus Colditz, Star Wars, Bomber and many more listings for you to key-in to your machine.

And as an extra bonus for everyone who has an interest in the BBC Microcomputer, the Owl supplement makes a comeback with issue two. It includes some marvellous tips and programs and if you thought colour was impossible in mode seven — then think again.

It's all wrapped up in a Tron cover, look out for it at your newsagents next month or fill in the form below to make sure of your copy.

I would like to take out an annual subscription. I enclose a cheque/P.O. for £10 (£23 overseas) for twelve issues. Computer & Video Games, Britain Court, Brixton, Peterborough PE1 1NW.

Computer & Video Games.
The magazine that makes computers fun.

LAST CHANCE TO TAKE IN PARIS

This could be your very last chance to go to Paris at our expense. If you have a game for any machine which you think we ought to publish, then we want to hear from you.

Come October, Computer & Video Games will be a year old and the writer of the best game to be published in the magazine in that first year will be treated to an all-expenses-paid trip to Paris with any friend he (or she) may care to take along.

We already have some idea of the games we most enjoyed trying out in the office and those reviewers who have tested games have also given us some forthright opinions on their favourites.

But the perfect computer game still has to be written and the judges will wait until the last moment before pronouncing on the selection.

However, we would also like you readers to have a say in the result. So if there is a C&VG game which stands out in your mind as giving the most hours of fun, please write in and let us know.

We want to know the name of the game and why you gave it your vote. After all it's your magazine so it's important that your opinions influence the result.

Write to: the editor, Computer & Video Games, Durrant House, 8, Herbal Hill, London EC1R 5JB.

WHO BEAT THE BUGS?

How did you fare in our June issue's Beat-the-Bugs competition? We've just finished sorting through the entries and, although this puzzle was thought to be more difficult than our first program a puzzle solution, the standard of entries seems just as high. The winner's name will be published in our September issue.

Did you choose the right three sides in our World Cup competition? If you rightly predicted the champions, runners-up and third-place play-off winners you are in the running to win an Atari TV games console. Watch our Competition pages next month.

Sinclair Research Ltd,
Stanhope Road, Camberley, Surrey.

PUZZLED BY THE PYRAMID

Dear Sir,
Whilst reading Keith Campbell's Adventure column in the February issue, I was most intrigued as to his comment on the availability of Pyramid of Doom, stating that it runs on TRS-80's, Video Games, Apples and Pets.

I happen to know that are also available for the Exidy Sorcerer, but never have I found any of the Scott Adams Adventure series for the Pet.

I have searched high and low for them, and have only found Adventureland and Pirate Adventure for the Pet, and they are in Basic 1 would therefore be extremely grateful if you could tell me where I could get hold of the rest of the series, as I am an Adventure addict — well almost — having several for use on a friend's Apple, but only two on the Pet, they being Hitch Hikers Guide and a version of Microsoft.

E. Armstrong,
Pinner,
Middlesex

Keith Campbell replies: You are absolutely right! I was in error stating that Pyramid of Doom is available for a Pet.

I based this statement on

too brief a glance at a Creative Computing catalogue which had separate pages for different machines. The Pet page did indeed list Pirate Adventure and Adventureland, whilst the other pages listed more than just these two.

Unfortunately I did not look closely enough at the Pet page. However, your letter has made this all very clear now — my apologies!

Incidentally, I hope I won't be sticking my neck out by saying that the Scott Adams series is now available for the Atari computer.

SEARCH FOR HARDWARE

Dear Sir,
First I would like to congratulate you on a fine magazine. As a complete newcomer to computers, I have found it extremely interesting and helpful.

I recently purchased a second-hand Sinclair ZX81 and with the help of your magazine, have found that already I am beginning to understand how programs work, and have been able to modify some of the ZX81 program listings you have published. However, I have two problems you could perhaps advise me on.

First, obviously the capabilities of the ZX81 are limited, and I am wondering whether it would be better to invest in ZX81 add-ons or to invest in a better machine.

Secondly, I have an Intellivision games console and wonder whether anybody makes add-on hardware that could be used, i.e. keyboards, memory etc, that would turn the games console into a workable computer. I am aware that Intellivision intend to market a keyboard unit, but this seems a long time coming. I have been waiting two years

for such a device already.

I am by trade an electrical engineer, and therefore would be able to construct anything that was available.

Considering that there are reputed to be more Intellivision consoles about than ZX81's I'm surprised that I've seen nothing advertised in this vein. Perhaps there are technical difficulties.

G. Coleman,
Worthing,
Sussex.

Editor's reply: The peripherals and software market is advanced enough to turn your ZX81 into a pretty impressive machine. My Coleman, they can certainly add a good keyboard, high resolution graphics, and colour.

Mattel will be the only people launching an Intellivision keyboard in this country. It will be distributed by ACE and won't be out until the very end of 1982 and will be expensive in comparison to some of the new microcomputers which are reaching the market.

BLANK LDDKS FROM ZX81

Dear Sir,

Last Christmas I purchased a ZX81 computer. I had previously used a Pet belonging to my school.

Now I am greatly disappointed. To start with my computer would not load, and I found the computer would continuously "crash". Now it will not switch on and only shows a blank screen.

I am writing hoping that you could advise me on the best course to correct the fault.

Guy Smith,
Banbury,
Oxfordshire

Editor's reply: There are many reasons why the ZX81 has the problems you list.

First, it could be one of the duff machines, if so, send it back and get it replaced. You can see from the letter below the choice of tape recorder is rather sensitive, and probably accounts for loading problems.

AUTOMATIC AGGRAVATION

Dear Sir,
I am having trouble loading and saving my own programs on my ZX81. I use a Philips AR113 which has an automatic recording level. Does this affect the saving in any way?

P. S. Murphy,
Chiswick,
London W4

Editor's reply: With the Philips tape recorder you have to use the 5-pin DIN socket for recording and playback. This, in conjunction with the ARL is about the worst combination of circumstances for the ZX81. You really need a new tape recorder, where you can use the earphone and microphone sockets. Sinclair have produced a long list of appropriate machines and it would be worth your while sending them an s.a.s. — to 6 Kings Parade, Cambridge — and asking for their technical data.

HDPS FOR ADVENTURE

Dear Sir,

I have recently bought an Atari 400 computer and I would like to find out more about it. I have heard that it has graphic facilities as yet unrevealed and I hope that Computer and Video Games will spill the beans. I also hope to see an adventure game soon.

Mr. Bess Siddiqui,
Greenford,
Middlesex

FILLING IN THE HORIZON

Dear Sir,
I have the use of a North Star Horizon computer and when I asked a friend about the use of graphics he told me that instead of POKE, FILL could be used.

I experimented with FILL but could not get any results. Please could you tell me how graphics are used on the North Star Horizon as the only games I can play are adventure games which don't involve graphics?

Stephan Evans,
Bodenham,
Hereford

Editor's reply: I can't really answer this as it depends on the type of video board in your system. Most graphics boards do not allow memory mapped graphics — which is what POKE and PEEK are specifically for. As you are using a VDU to display the video signals, the methods used depend on this, the graphics board and the Basic.

HELP! I'M BEWILDERED

Dear Sir,
I have only been involved in computers for about nine months and practical computing for about one month and am therefore totally bewildered by the whole thing.

I am saving up frantically for a computer and I have a couple of questions to ask. Why is the ZX81 so much cheaper than its nearest rival? What's the difference?

In the April Mailbag someone asked what the cheapest price for a memory expanding pack was. Could you tell me if the same is true for the computer itself?

Ian C Feast,
Bournemouth

Editor's reply: The ZX81 is mass produced. This combined with some clever design techniques allows it to be sold cheaply. It has a limited application and within these limits does things very well. Other, more expensive, computers can do more. If you only

want to do single things then why pay for something you don't need?

New memory units are available for the ZX81 all the time. Now that Sinclair have reduced the 16K RAM to £29.95, this seems the best buy.

TEACHER FOR THE APPLE

Dear Sir,
My father owns an Apple II Plus, for which we bought a number of games.

As he is now thinking of buying the Wordstar word processing system he is about to buy the Z-80 Software for its CP/M language. What extra games will I be able to play on the Apple once the Software has been installed?

I am a very keen reader of your magazine and copy nearly all the Apple games you print.

Angus Winchester,
Ilfray,
Oxford

Editor's reply: There are many games running under CP/M. As this operating system is mainly designed for business use you will probably find that most are available on the Apple already. I don't hold much hope for any new ones, especially as the Apple has a rather idiosyncratic method of implementing CP/M.

SATISFIED READER

Dear Sir,
During the course of the present month I have discovered your fabulous magazine. I am very impressed with the amount of information you manage to supply. On reading the March issue, I have found a great number of ZX81 software suppliers, previously I knew of none.

M. McKenzie
Ipswich
Suffolk

TANTALISING PRDGRAMS

Dear Sir,
As a relatively new user of computers and owning a Sinclair ZX81 my knowledge of the Basic used by other computers is very small. I would be grateful if you could inform me if there is a book that will change the Basic used in the tantalising programs you write for other computers, to that of the ZX81's Basic.

Kevin Hewitt,
Longhope,
Gloucestershire

Editor's reply: Quite honestly the most comprehensive booklet on Sinclair Basic is the ZX81 Instruction Book! Unfortunately the

information is not in any logical order! You have to read through it about ten times to find what you need. There is no book that will do the "translating" for you.

CHILDREN'S FAVOURITES

Dear Sir,
Although I enjoy reading your magazine very much and find the contents very good I think it could be bettered by the addition of a so-called children's page.

This could contain programs written by children and competitions. It would also contain letters and queries and some hints. After all, with the increasing number of micros being used at school, a lot of your readers are children and if there was a children's page it would be easier for them to get their program printed.

John Hunter,
Middlethorpe,
Scotland

Editor's reply: In our experience children are quite capable of taking the lead in the microcomputer gaming world John. Certainly many of our games are sent in by young contributors and I would hate to patronise them by including their offerings on a children's page. One of the fastest and best machine code space invader games I have come across was written by a 16-year-old. The upshot is that you youngsters can force your way onto our pages without as making any concessions.

VERY SORRY PEEPLE...

Dear Sir,
We would like to apologise to all our customers for any delay or inconvenience caused on orders received by Anglo American Software.

This was due to an internal staff problem. Orders placed before May 10th have been mailed, and would anybody who has sent an order to us please contact us as soon as possible.

Mike Davies,
Anglo American Software,
Birmingham

COMpetition COMP

WIN A BALLY PINTABLE

Bally's marvellous Electra pintable takes pinball just about as far as it can currently go.

Pinball fanatics will know it as the three level pintable which adds a mini-playfield to the excitement of a two tier game. This pinball machine will go to the home of the lucky winner of our pinball competition.

And the winner could even find his ideas incorporated in a future Bally pinball design.

So how do you win an Electra pintable for your own living room, bedroom or hallway? Simply by being original. We want you to come up with an idea for a feature on a pintable — or any other arcade game — which you think would greatly enhance its playability. Or you could come up with a completely new machine.

You'll have to go some to match the current crop of pinball designers, who have introduced some pretty impressive features lately. The Electra itself is a good example of many of these and we have gone into some of these, below. But among the many innovations, currently pulling people into the arcades are: drop targets, play fields on more than one level, captive balls, pinballs that talk back to you or the Vector's machine's flip-o-meter.

Pinballs have also found a new direction recently. The Williams' Hyperball and Bally's Rapid Fire (reviewed on page 27) have given a new twist to the pintable by turning them away from the usual keep-the-ball-in-play strategy, to a firing game, shooting balls at lit targets

It is this kind of completely fresh outlook on a game that Bally hope the winner of this competition will produce. It can be a single feature on a game or a whole new concept but it has to be practical, so bear in mind the following criteria:

- Physical dimensions
- That the game is capable of

being mass-produced

- Cost.
- Weight.
- That it is safe to be used by the arcade player.
- The idea must not be stolen from any other arcade or pinball machine.
- And most important, it should be creative and original.

The Bally Pinball Division will present an Electra pinball machine to the grand prize winner. All entries will be judged by the Bally Pinball Division's new product board and announced in Computer & Video Games. All entries will be the property of the Bally Pinball Division and the entrants will assign

all rights, patents and privileges of their design to the Bally Pinball Division.

No employees of Bally or Computer & Video Games or their relatives may enter the competition. The judges' decision is final and no correspondence will be entered into.

Send your entries to The Pinball Competition, Computer & Video Games, Durrant House, 8 Herbal Hill, London EC1R 5JB before September 16th 1982.

More features than *Cosmopolitan*, is one way you could bill the Electra pintable. For pinball buffs, we'll just outline a few of these.

The first difference you will notice is the split-level playfield, which has two upper tiers and a central mini-playfield.

On the upper level you'll find stand-up targets, rollover buttons and a saucer arrow which will release another captured ball. Drop targets and a stationary target combine to produce a boot-a-ball multiplier.

Passage to the third, mini, playfield is achieved by collecting Electra time units on the upper levels. Each sequence of hit targets leads you into new possibilities. Now take a deep breath and vow never again to refer to any arcade machine as: "Just another pintable".

BRAINWARE ANSWERS

The answers to our July Mind Routine problem is:
Billy Bashem 59 pts. vs. Roger Relem 52 pts.

15 reds, 5 yellows, 1 green, 2 browns, 6 blues, 4 pinks and 3 blacks (giving a total of 111 pts).

The correction solution to last month's Nevera Crossword is printed right and the winners' names will be published in next month's issue.

For more puzzles turn to page 80 for Mind Routine and Nevera Crossword.

ANGLO AMERICAN SOFTWARE CO

TRS-80 ≈ ATARI ≈ APPLE ≈ VIC

We know what it is like out there, because that's where we came from. Before we decided to become software entrepreneurs, we were just like you enthusiasts searching through magazines for the ideal mail order software source. What we hoped to find was a single entity that offered an ultra-wide selection for our micro-computer. That pre-selected only the best of many similar sounding programs that reached the market every month. That could give us personal assistance with the purchase decision process, and that stood behind its products. When we couldn't find it we decided to become it. So **ANGLO-AMERICAN SOFTWARE CO WAS BORN.**

Please state clearly the program(s) you require. Include your name, address & machine type + memory size. Prices include VAT, postage & packing.

WORLD CUP SHOCK

There was really only one way to put our June issue's World Cup Manager game to the test. And that was to get a national squad manager to play it.

So we invited England's manager Ron Greenwood to test out his soccer skills against the computer.

Ron graciously accepted the challenge and just before the England squad flew out to Spain, Sharp sent three computers (complete with the game) down to the squad's football headquarters at a Hertfordshire hotel.

Several other members of the squad also tried their hand at the game with Steve Coppell and Kenny Sansom being the notable successes.

Between them they guided a rather strange England line-up through the first round and with Kenny in charge the team narrowly failed to qualify for the semi-finals on goal difference.

Ron fared rather less well. With a team that consisted of: Corrigan, Mills, Foster, Sansom, Wilkins,

McDermott, Coppell, Keegan, Mariner, Woodcock and Rib, Ron took on Hungary in the first game of his tournament.

C&VG's editorial assistant, Susan Cameron, helped Ron to key-in the opposition names and choose his tactics. And the result?

England lost 7-0! Well we never said the game was easy...

But he ran into a few tactical problems, like being forced to bring on substitute Peter Shilton, in the attack after a disappointing first half showing, in which the Hungarians claimed most of the midfield and stamped their authority on the game early.

Confessions of a Bug

Machine code! What on neutral gave the editor the impression he could speak that past us?

The Bug hasn't been born who can't put a spanner in the works of a machine code listing. Snag Junior got to grips in line 1 which has a real question mark over it.

Unfortunately author Pat Norris, soon spotted the problem and came up with a subroutine which makes data entry into that first line much easier. First of all replace line 1 with 45 fullstops.

1 REM (45 full stops)

Next type in the following short routine

3000 FOR A=16514 TO 16553

3010 INPUT B

3015 POKE A,B

3020 NEXT A

3025 STOP

After this short program has been typed, type in GOTO 3000. The cursor will appear, awaiting input. Put in the following data: 33,215,64,17,43,117,35,126,167,254, 118,32,7,35,35,35,35,24,242,254, 23,32,1,201,214,28,135,135,135,135, 35,134,214,28,18,35,24,223.

After the data has been entered, delete lines 3000 to 3025.

One other point is that the asterisks in line 68 are two multiplica-

tion signs and NOT a power sign.

Also a piece of rogue paper obliterated a part of Pontoon during the printing process—ably abetted by T. Hitch. Line 133 suffered as a result: 133 IF V=2 AND A=21 THEN PRINT "YOU HAVE BLACK-JACK"

is the correct version.

Moonshuttle was left to Screaming Foul-up but he couldn't do much with it (he's not been well recently). But the printed version was for use with the keyboard rather than a joystick. The J in line should be changed to 37137 if you wish to use joysticks to play the game. Bye for now

yours Mal

WIN YOUR FORTUNE ON THE HIGH SEAS

BARGAIN BYTES TWO

Avast landlubbers! Here's your chance to take to the high seas in search of fame and fortune.

It's up to you to work your way up the ship's hierarchy, from cabin boy to admiral of the fleet, in a story similar to that of the fictional Captain Hornblower.

Once aboard the good ship ZXII you must use your seafaring talents to win promotion by fearless performance in battle. Skillful use of resources is vital while sailing the seven seas. Supplies, men and ammunition must be carefully calculated and finely balanced.

The journey is hazardous and the battles fierce but a determined player can battle his way up the ranks to become First Sea Lord.

See Adventure is one of eight games featured on Bargain Bytes Two. Other major games on the cassette are Stock Market, in which the player must make instant buying decisions as market information flashes up on the screen.

Noughts and crosses, with three skill levels, a fruit machine game, complete with random

holds, nudges and a winnings counter and a moving graphics Ski Run game are also on the tape.

The rest of the cassette includes educational games, a general knowledge quiz, an alphabetical Simon game and a money calculation puzzle.

Bargain Bytes Two is available from Richard Shepherd, of Maidenhead, Berkshire. It needs a 16K RAM pack and costs £5.00 including postage and packing.

WIPE OUT THE NASTIES

VIC PANIC

The only way to deal with some monsters is to trap them in a pit and hit them on the head with a shovel.

That's the aim of the little character who inhabits the VIC Panic maze.

You are in control of this little chap who, armed with a spade, rushes around the maze digging pits and trapping monsters. The aim is to wipe out all the nasties and collect a high score.

The game is similar to the arcade Space Panic machines and runs on the unexpanded VIC 20.

The cassette is available from Liverpool-based Bug Byte and costs £7.00 including postage, packing and VAT.

THE MAZE MASTER AGAIN!

ATTACK-MAN

No computer is complete without a version of that master of the maze, Pacman.

The latest to sport a copy of this busy little creature and his antagonistic cohorts, is Texas Instruments' underrated T.1.93/4.

As usual the player must guide this hungry alien-ego through a maze-gobbling points and avoiding the monsters.

The cassette costs £5 and is available from Stephen Shaw of Stockport. Coming soon, from the same source, are more T.1 programs which are being brought over from the Canadian Norton Software catalogue.

TO WORK ON AN EGG

SPACE PIRATES

Yo Ho Ho and a basket of eggs!

What's this — have all those rough tough pirates gone soft in the head? No, they are still hard boiled characters, but you could say that this latest addition to games tapes for the BBC Microcomputer is a real cracker!

In Space Pirates you really go to work on an egg. On screen is an asteroids type spacecraft which you control to defend a clutch of space eggs under threat from some thieving aliens.

Once an egg has been snatched however you only defence is to shoot it. Then it turns into you.

next spacecraft. If you miss all the snatched eggs then you'll end up minus your trusty ship and nothing for breakfast.

Space Pirates runs on the model A machine in 16K, and the tape comes from Bug Byte of Liverpool and will cost around £6.00.

Bug Byte are working on other games for the BBC machine, including a chess tape with 1,000 yes 1,000 — skill levels, and Polaris — a submarine warfare game for the model B using high resolution graphics.

EW PRODUCTS NEW PRODUCTS NEW PRODUCTS NEW GAMES NEWS

ARMED, FUELLED AND ON THE MOVE

SCRAMBLE

Scramble aptly describes the player's desperate antics as he attempts to score points above a world on which he is barely equipped to exist!

Already a big arcade success, the game puts you in charge of a plane armed, fuelled and on the move across a mountainous landscape.

Quickserve is the company responsible and it is quickly making a name for itself for adapting arcade games onto the limited graphics facilities of the ZX81. This version costs £4.95 (including post and packaging) and allows up to five steps to appear on the screen at any time and has the fuel dings, ground defences and changing terrain of its video predecessor.

ROBOTIC GENOCIDE

BERSERK

Berserk was the strange name given to the game of robot genocide which frequented arcades last year.

It crops up again on one of the games cartridges which can be bought for the new Dragon 32 microcomputer. The Dragon is being manufactured in Swansea and is a division of toy company Mattel.

Berserk challenges you to escape from a room full of robots without running into the walls, the robots, or their bullets.

The game comes in cartridge form to slot into the computer and costs £19.95. Other games cartridges currently available are Cosmic Invaders, Meteoroids and Ghost Attack.

Bank, dive and climb as the Earth travels past beneath your feet — or actually it's on your TV screen which has been transformed into a cockpit window.

Flight Simulation is the name of the game which is one of a series of five being produced for Sinclair by software house, Pison.

The simulation places you in a cockpit of an aircraft.

The sky and the ground move through this window, and although it hardly bears comparison with the multi-million pound

FROM THE COCKPIT

FLIGHT SIMULATOR

Flight simulators which real pilots train on, it does offer some of the excitement and a very real challenge.

The tapes are marketed under the Sinclair label and will be available from the company or your local W. H. Smith for ZX81s with a 16K Rampack. Flight Simulation costs £5.95 and the other programs are:

Fantasy Games which retails at £4.75 and offers two adventures in a Pantons Swamp and on the Sorcerer's Island.

Chess costs £6.95 and has six levels of play with a chess clock on which to time yourself.

Backgammon, the gambler's favourite dice game, has a graphics board, rolling dice, and doubling dice for £5.95.

The space invaders look-alike, Space Raiders shares a cassette with the familiar City Bomb type game, Bombai and retails at £3.95.

DEATH LURKS IN SPACE

INVADERS AND ASTEROIDS

Take your ZX81 where no Sinclair has gone before. Out in the darkest reaches of space lurk the Invaders and deadly fields of fast moving asteroids all on to do you terminal damage.

Both games include most of the features of the arcade favourites and are written entirely in machine code for fast and furious action. Invaders has 10 skill levels, a high score listing, flying saucers, a bonus feature and realistic invader movement.

Asteroids has 10 skill levels, a wrap-around screen, live attack waves and those flying rocks come in three sizes. There is also a high score listing and bonus feature.

Invaders and Asteroids will run in 4K of RAM and are available from Silversoft, Bader Park, Malsham, Wiltshire, or the London based Small Enterprises. Invaders costs £4.95 and Asteroids will set you back £5.95.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS GAMES NEWS

THAT LITTLE YELLOW FELLOW

SNAPPER

Pec Men, that cheerful platoon of the accidents will soon be inhabiting the recesses of the BBC Microcomputer thanks to Acornsoft.

Their version of the well known video game is called Snapper — named after the yellow creature which chomps its way around a maze.

The game — a faithful reproduction of the original — is easy to play using four well-placed keys on the BBC keyboard which guide the hungry Snapper around the maze.

Snapper has even chomped his way into the respected pages of the Financial Times. Bowties hatted city gents were told that Snapper is "a little yellow figure" and he "moves about a sort of maze and scores points by gobbling up little wafers, power pills and ghosts. The longer you keep him alive the more points you score. If he eats all the video wafers he gets another life. But he can be destroyed by the

ghosts and can only eat them if he has just eaten a power pill. So now you know.

The maze appears in eight colours — using the BBC microcomputer mode 2. There are also sound effects — including gulping noises as the Snapper eats its way around the maze and an audible warning when the little creature has eaten a power pill

and is able to chase and devour the ghosts.

Snapper includes a high score table. To qualify for a place you have to score at least 1000. The average beginner should score about 4000 points. The highest so far is 100,560 according to Acornsoft.

Acornsoft Snapper is available from Small Enterprises.

FOR THE CUNNING AND DEVIOUS

PHILOSOPHER'S QUEST

Do you have a cunning and devious mind? You'll need one to solve the new adventure game, Philosopher's Quest.

This text based adventure runs on the BBC Microcomputer Model B and takes the player through a whole series of strange settings.

The usual adventure format of command words is used to help the budding philosopher along on his search for the ultimate truth. During his search he has to overcome several what the devils programme of Acornsoft, refer to as "cunning puzzles" on the way.

Part of the action takes place in an underwater scenario but there also puzzles to be solved on dry land in peculiar rooms as well as out in the open. But I promised not to give too much away so I'll step here, if you want to know more.

The game is available from Cambridge-based Acornsoft and costs £8.65 plus VAT.

MEET THE SUPER BIKES

TT RACER

Rear off on a high-power racing motorbike for the thrill a minute experience of a TT companion.

A realistic motor cycle ride and his bike are in your hands on this difficult game in which bikes smash into trees, barriers and oil slicks.

You must complete as many laps as possible in this 3D second race. Manoeuvre your bike with the sensitive joystick and see him lean to the right or left from gravitational pull going round the bends.

Absolute control of the bike rests with the joystick, by pushing it hard forward the speed increases quite drastically and usually makes the bike head straight into the nearest tree or other obstacle.

It's best to try slow laps at first to learn the best technique for handling sharp bends. Once you are more experienced you can

speed things up and complete more laps.

If you find you are travelling too fast pull the joystick towards you and you'll slow down. The game is for one player only, but that's just as well because additional bike riders would only clutter up the track and make your life more difficult.

Each time your rider crashes the time on the clock ticks away, giving you less chance to notch up completed laps. It is difficult to master the controls of the game but once done you will find it challenging and compulsive to tackle.

It runs on an Atari 800 with 16K memory and is available from Chryss stores, Celeste Computers and Maplin Electronics for £19.95. North London based Centaurosoft is the producer.

AN ALIEN VETERAN

Snatcher's new baby, the Spectrum, is fast getting a library of software all for itself.

The latest addition is the Spectral Invaders cassette — a faithful copy of the now veteran foreigner of the video game boom.

It is written in machine code and makes full use of the Spectrum's graphics capability.

SPECTRAL INVADERS

The game is controlled by joysticks and has a high score feature, as well as the usual invader antics.

It runs on the standard Spectrum and comes from Bng Byte of Liverpool priced at £5.00 including postage, packing and VAT.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS NEW GAMES NEWS

DRAGONS AND GOLD DIGGERS

Deep underground in a mysterious land there lies a hoard of undiscovered golden treasures which are talked of in whispers in inns and taverns by groups of strangely garbed travellers.

The treasure is guarded by several denizens of the caverns which the would-be treasure hunter must outwit or defeat if he wishes to snatch some of the glittering prizes.

Colossal Adventure is named after the central feature of the

COLOSSAL ADVENTURE

game, the Colossal Cavern — a maze of caves and underground passages containing fabulous treasures. The player must deal with a dragon, a snake, spiders, orcs and a troll in order to grab the loot.

Commands are entered as English phrases so the game is simple to play — but difficult to complete. It should be possible for the player to finish the game

— but the makers, Level 9 Computing, are offering a special service to their Adventurers.

Each copy of the cassette comes with a stamped addressed envelope and Level 9 has undertaken to answer one question from a player who finds himself stuck in the caverns and provide the odd hint.

Colossal Adventure has a twist in its tail. Just when the player

thinks it's all over it enters a new phase. The cave is flooding and you must rescue the elves.

The program is written in a super-compact language developed by Level 9 called "a code". This is specially tailored for the production of Adventure games and includes a compiler and a small "a code" interpreter which runs the compiled code.

Colossal Adventure is the first of a range of Adventure games from Level 9 Computing of High Wycombe, Buckinghamshire. It runs on the Nascom 1 and 2 in 16K and costs £8.00.

IT'S SNOW JOKE ON THE SLOPES

SKI-ING

Skiing against the clock may look easy to master but controlling the athletic skier in reality is a true test.

There are two different runs to attempt, a straightforward downhill course and a more taxing slalom race.

You have as many skiers as you need to complete the course within the set time limit, and the boundaries of each course remain the same although the features alter.

The slalom is the more difficult of the races because you have to make your skier twist and turn with agility between the flagged posts.

Hazards abound on the course in the shape of ice patches and

log piles. If you ski over an ice patch, which are denoted on screen by randomly placed blue pools, the impact speeds up the skier. That has a tendency to land you in trouble as it takes time to adjust to the new speed.

If you find your skier hurtling headlong into a pile of black logs press the action button and he

will leap over the heap.

An amusing game element occurs when a skier crashes. The game stops and two stretchers bearers run through the trees onto the slope and cart off the injured skier.

Skiing was written by Centaursoft and runs on an Alan 800 and costs £19.95 from branches of Currys, Maplin Electronics and Calisto Computers.

A CHALLENGE FOR SPACE CAPTAINS

DEFENDER

Can you pilot a spacecraft on a mission of destruction and return safely to base?

Microtanic Software have issued this challenge to all you space captains out there in the form of their new cassette Earth Attack.

You have to fly your fighter over a rugged terrain of mountains — dodging missiles fired from bases on the ground and bombing fuel dumps to ensure your supply is replenished during the mission. If the game sounds familiar that's because it's based on the decade favourite Scramble.

It comes complete with sound effects and good graphics and runs on the Microtan 65 in 8K or less. It is available from Microtanic Software of Dulwich, London and costs £6.95.

Microtanic also have versions of Defender and a Pac-Man type game called Gobbler.

TV GAMES CENTRES TV GAMES CENTRES TV GAMES CENTRES VIDEO SCREEN

WHEN EAST AND WEST KEEP QUIET

BRIDGE

The most animated aspect of the card game bridge, is the post-mortem which follows a defeated contract.

But when the Alan TV games console becomes your partner the "How on Earth could you bid four spades with that hand?" banter becomes a little one-sided.

Bridge has so far defeated the programmers' efforts to turn computers into club-level players, despite some imaginative attempts. The fact that the game is divided into the two distinct areas of bidding and playing, added to the problem that good bridge players usually combine educated guesswork with a fair amount of psychology, makes bridge a hard game to program.

Beginners and those who wish to relearn bridge skills will find the cartridge useful. It plays seven levels of bridge. The first three are all bidded and played, the other four are just played. It uses the common Alce bidding

system and deals out a hand of cards which is displayed on the screen for you, as seen by the South position player.

Your partner North and you are the only two players involved in the bidding — so a rather large picture of bidding systems is built up. East and West cannot double unlikely contracts or outbid you. All of which makes the playing of

the finesse (the winking out of a key card by devious means) very difficult to judge as there are less hints as to who holds the card.

At £24.95, the Activision cartridge only hints at the nuances of this kind of card games but it will teach beginners and help less players sharpen their skills. It is marketed over here by Computer Games.

NOW DODGE THE GUIDED MISSILES

LASER ATTACK

You are in command of a space armada lying on a warlike mission to a planet in the outer galaxy.

Your mission is to lead a squadron of jet fighters in an attack on the planet's surface. Enemy fire comes from laser cannons placed strategically on the planet. These fire radar guided missiles which home in on your spacecraft.

There are only two enemy cannons to contend with in the first round of Laser Attack. These are only worth one point each.

You have an air fleet of four super-specieships and can change planes if one is shot down.

After the first two laser bases have been destroyed more appear on the screen. These are worth more points the further you progress through the game.

When the eighth cannon has been wiped out each one thereafter earns you 10 points.

To avoid the missiles you must fly your ship swiftly and accurately to confuse the projectile's computer guided system. Your ships are controlled with the handsets by moving the joystick to the left or right, and up and down.

To activate your own weapons push the red button on the hand-

set but take care to aim and fire at the right moment.

Several variations are included in the game with varying degrees of difficulty. Game four only gives you one chance to blast a laser cannon. If you miss a missile will automatically lock on to your craft's position and destroy it.

Laser Attack runs on the Activision MPU2000 and costs £14.95 from stockists.

STAY OFF THE COMPUTER CAR'S TRACK

HEAD ON

Driving a high-powered Formula One racing car can be as hazardous on your television screen as it is in real life.

In Head On the screen is filled with the lanes of a race track which spread outwards from a central rectangle. The car under your control can quickly swap lanes to avoid a head on crash with the computer controlled opposition.

Your driver is luckier than his real-life counterpart. For in this dice with death he has three lives to play with, only the third collision is terminal.

Using the handsets you can regulate the speed of your car. By pushing the joystick to the right you increase the speed. To slow down move the joystick to the left.

The game comes complete with small cards which fit on top of the keypad. These are used for directional control of the racing car.

On the bottom of the screen is a clock which keeps track of the number of miles your car has covered.

There are nine different variations including games for one or two players, a role reversal game in which you have to attempt to collide with the computer controlled car, and a version when two cars are computer controlled.

This game runs on the Activision MPU 2000 and is available for £14.95 from all the usual ACE dealers.

CHESS

I have talked about human world champions beating chess-playing programs. Now I would like to introduce the strongest chess program of all, BELLE which has beaten several top players.

BELLE is a special-purpose chess machine built by Ken Thompson of Bell Laboratories.

Its processing speed is so great that it can generate a candidate move in one two-millionth of a second and can examine 160,000 positions per second.

BELLE has a stored opening book of 300,000 positions which it scans in just one and a half seconds! It was built out of 1,700 chips in the Spring of 1980, won the World Computer Chess Championship a few months later and has since won a number of impressive games against players of up to senior master standard.

The human opponent for the game that follows was Hans Berliner, a strong U.S. master, who is also a former world champion for correspondence chess.

Berliner has himself spent considerable time writing chess playing programs and

was the originator of the phrase "the horizon effect" to describe the blindness experienced by any program at the limits of its analysis.

He is also the author of a calibrated Backgammon program which won a match against the reigning human world champion a few years ago.

Berliner's motivation for arranging a challenge game against BELLE was, in his own words, that "I felt it may be getting to the time when I would have my last chance to beat the world's best mechanical chess entity, so I thought I'd better try to do it now."

"It would be foolish to play a normal game against BELLE. It was clearly better than I tactically, so I had to take advantage of its lack of knowledge in some way, while intending to avoid tactical complications if at all possible.

"My idea was to get it into an opening system in which I had private (unpublished) analysis, and hope to get an advantage that could hopefully be converted into a win at some future time."

restricts the Knights even further

28... P-KB4, 29. P-R3, K-B2; 30. K-B1, P-K4; A temporary Pawn sacrifice aimed at getting his King into play. However, the King and Rook now become vulnerable to Knight forks

Berliner comments: "I had done my calculations and everything seemed to be in order. But against a program that was by now probably looking at least nine ply deep, one mistake could prove fatal."

31. PxP, K-K3; 32. N-N6, R-B7; (If 32... KxP?; 33. N-B4ch wins the Rook.) 33. N-K2, KxP; 34. K-K1, K-K5, menacing, but also placing the King in a dangerously exposed position. 35. N-QB4, P-KN4; 36. K-Q1.

36... R-N(B5); 37. PxR, K-Q6; More bold play by Berliner. He is now a Pawn for a Knight behind in material, but has a passed Pawn on the Queen side... a potential one on

Fig 1. Position after Black's 18th move

Fig 2. Position after White's 28th move

Fig 3. Position after White's 28th move

Fig 4. Position after Black's 41st move

Berliner's obvious respect for his electronic opponent may seem excessive but it is justified by the game that follows.

BELLE (White) v H. Berliner (Black - Alekhine's Defense)

1. P-K4, N-KB3; 2. P-K5, N-Q4; 3. P-Q4, P-Q3; 4. N-KB3, P-KN3; 5. P-QB4, N-N3; 6. PxP, BPxP; 7. B-K2, B-N2; 8. O-O, O-O; 9. B-K3, N-QB3; 10. N-QB3.

Up to here BELLE was "in the book" 10... P-Q4; 11. P-B5, N-B5; 12. BxN, PxN; 13. Q-K2, B-KN5! Threatening to take the Queen Pawn. 14. QR-Q1, NxP; 15. BxN, BxR;

16. RxR? Berliner considers this a subtle mistake. Apparently White wins two Knights for only Rook and Pawn. However, the variation favours Black who obtains much

better-placed pieces in the following end game. 16... QxR; 17. NxQ, BxQ; 18. N(Q4) x B, KR-Q1! Threatening to penetrate to the seventh rank. BELLE now defends well. (If for example, 19. R-Q1, RxRch; 20. NxR, R-QB1; wins a Pawn.) 19. P-QN3, PxP; 20. PxP, R-Q7; 21. P-KB4!

A good move which prevents Black chasing away White's Knight with a Pawn when it reaches the good defensive square of Q4.

21... R-QN7; 22. N-Q4, R-Q1; 23. N-R4, R-Q7; 24. N-QN5, P-QR3; 25. N(S)-B3, R-QB7; 26. R-Q1, R(Q1)-Q7; 27. RxR, RxR; 28. P-KN3.

White is badly restricted. It was necessary to defend the King's Bishop's Pawn to avoid threats such as R-Q5 and R-QN6. Berliner now

the King side and a strong King position.

He comments, "Black has excellent winning chances." Of course, this largely depends on the player's ability. Against a lesser opponent than Berliner, BELLE might well go on to draw or even win.

38. N-KN1, P-N5; 39. P-R4, K-K6; 40. N-K2, K-B7; 41. K-Q2, P-QR4;

Only now does a Black victory begin to seem likely to the untrained eye. Even so there are many difficult variations to consider, which space prevents me from including here. White's best chance now was probably 42. N-Q4. However, BELLE continued: 42. K-Q3, P-R6; 43. N-Q4, P-R6; 44. K-B2, P-R7; 45. K-N2, P-KB5! 46. N-B5, PxP; 47. Resigns

C.P.S. GAMES

THE LORD OF THE RINGS: part 1

This adventure takes you right through the book.

Part 1 takes you from the Shire to Rivendell. It is a half adventure, and on the way the Dark Lord throws everything at you. You can't find him. £8.00

DARWIN

Evolution at its prime. You start as a single cell. Environmental factors constantly change and you have to make decisions. If you adapt you may survive, and change. Ideally you start up simple but beware: as the program you're a worm, you might end up being a lot of things. The game costs a worm. £7.00

EVOLUTION OF MAN

This game begins as a new man, in that remote past, when our ancestors were roaming the plains. As climate and other factors change, you must adapt. The way in which you do this influences the fate of your family. You will take a Neolithic man, a Cro-Magnon, and a modern man. The game costs a man. £7.00

Our version of Evolution of Man are based on scientific facts and have a didactic educational value.

THE GAMBLER'S PARADISE

Bring your own chips and dice. You can play a wide range of games: roulette, dice game, heads and tails. You get a lot of fun from a new man. Money costs a man. £3.00

PETER RABBIT AND THE MAGIC CARROT

An adventure for the very young.

This new series of adventures is mainly based on graphics. Peter Rabbit goes on a quest for the magic carrot. On the way he is helped by the forest, the meadow, and the most famous friends. He must find the carrot. He then gets out with the magic carrot. Want to see more with eyesight up? £3.50

Also available: Peter Rabbit and the naughty Owl.

Peter Rabbit and the Wabbit.

KING ARTHUR

Can you win the battle to free England from the Angles and Saxons? King Arthur's fight for freedom in a fascinating war game. £7.00

ATARI OWNERS!!!

The Wife's Tale

BY SUE GARDEN

"Disaster! I have been foully slain by a wicked warlock!"
"I've torpedooed the sixth Klingon. Now I must find a Starbase. Heading 60 degrees warp factor eight."

Such are the remarks that hurtle through our house, as husband, children, husband's friends, children's friends cluster around the 1980s equivalent of the old joanna

No more do the tinkling ivories herald a burst of "Love's Old Sweet Song", nor even a lusty chorus at "Roll Out the Barrel". These days the keys are pressed to cries of "Pake the Ram", (the modern version of "Pin the Tail on the Donkey"), "Get G String" (nothing to do with strip poker) or, more enigmatically, F2 00 OC

The computer, it seems, is the latest in man's compendium of hobbies to lure him from the real world. "At least," declares my galling widow friend, "your husband does not disappear for hours on end every weekend. You know where he is."

Physically, I cannot deny, there is a figure hunched intently in a corner at the room. The cups of coffee, carefully positioned, are retrieved, empty, after a lapse of time. At mealtimes, the figure is there — well, eventually — and gives every appearance of eating according to convention.

Con conversationally, it is another question. Casual remarks ara mel with a dreamy, vacant look and bizarre rejoinder.

"More mince, dear?" I ask. "I saved 500 bytes," comes the reply. At what cost to the digestion, one wonders?

"The sink is still blacked,"
"... then it might crash!"
Surely it cannot be that serious?

"I see the grass has grown

I see the grass has grown. I said "Maybe I could inst del it", he replied "With a phasor operated lawn mower I suppose"

again." "I could inst Del it." With a phasor-operated lawn-mower, I presume.

How insignificant the minutiae of everyday life must appear, to one who has just been ruling the world Belate that, he saved the known universe from extinction by an alien larce, then traded intergalactically in medical supplies and machinery. Why is the magic not the same in a trip to the chemist for soda, or to the hardware shop for a spare part for the lawn-mower?

I was engaged in conversation recently with a plumber who had come to mend a leak in the water-tank. ("A drip? Gaa! Gaa! Gaa! woman, tamine has just wiped out two-thirds of the population.") Spying the computer, he expanded on its mysterious allure. The aggression of mast games appeals to man's violent nature. He can sublimate, electronically. Instead of beating the wife. They don't make plumbers like they used to.

Had I realised that my house could be run by computer, he enquired. It would put on the heating, the oven, the electric blanket. Da tha shapping, cook the meat, wash the shirts, scrub the

floors? My interest was roused. Well, no, not yet, they were working on it.

As the programmers tend to be men, obviously they go first for the tiresome jobs around the house (i.e. pulling on switches), leaving the smaller tasks to a later stage of development.

In the States, there is a recognised breed of computer widows. A computer can be cause for divorce. Neglect? Desertion? Adultery? I have had my doubts about that BASEX tape.

The backcase groans with a new range of reading matter. *Software Secrets*, murmurs one tome, beguilingly. *1001 Things to do with your Personal Computer* volunteers another. Odd that it does not mention the half a dozen which spring instantly to mind.

"If you can't beat them, join them", says the old piece of advice. Imagine the scenes at violence it we were bath jostling for the eight-hour slot on a Saturday.

Anyway, dinner is ready. "Won't be a moment. I'll just program it to play itself at chess while we eat." Well, that's fun for it! Imagine the surge of triumph in its steely breast when it wins.

Come to think of it, I wonder whether the cunning beast is gradually eliminating the human element altogether. It sorted out the world, all by itself, for four hours the other evening. End at human life in 2030. It was ted with more information. We watched, helplessly, for another four hours. End of human life in 2030.

My toothball widow neighbour knocks on the door "Fancy a trip into town?"

"Well I would, but I shall have to make tea in a minute." The soulless tones of "Sa long, it's been good to know you" came clanging into the kitchen. "That means the SS Enterprise has collided with a star. I must put the kettle on quickly, before he baldly goes anywhere else."

She looks baffled. What a simple life she leads! She knows her husband is running round a muddy field, in bitter cold and sharts, chasing a piece of leather.

Mine, an the other hand, he's zapped live alien spaceships and tailed, on a slight navigational error, la repel a galactic invasion.

It makes you sart at proud doesn't it?

ILLUSTRATION: TONY ROGERS

ARCAD

The 3-D space fortress

ZAXXON

The deep blue fortress of Zaxxon floats in space at the frontier of a third dimension in arcade games.

It is heavily armoured with missiles, cannons and forcefields and your mission is to fly through its defences to destroy the deadly robot and its homing missile.

Over the wall and the enemy fortress is mapped out in marvellous detail before you. One hand on the joystick and the other on the fire button you can see the ranks of missiles, the green cannons and red fuel tanks. Planes are waiting on the runways beneath and these can be strafed for extra points while blown-up fuel tanks provide extra fuel as you fly deeper into the fortress.

The control stick allows you to bank left and right and change altitude. You can judge your height by the size of the player ship which appears larger or smaller, depending on altitude. And there is also a shadow which follows its every move.

Altitude is critical when you fly through the tiny gaps between the walls and the electronic barrier. If you survive the enemy barrage in the fortress, you next have to take on the enemy fleet.

It's made more realistic as you have to be at the correct altitude to score a hit on the enemy planes. Once through the dogfight, you are involved in a new battle at the enemy headquarters. This is a better defended fortress with tighter passages and increasingly heavy firepower.

The climax of Zaxxon is the battle with the armoured robot and its homing missile. Here six hits are needed before the missile and robot are vanquished.

THE GAME WITH MORE ZIP

For a game with a little more 'zip' to it, try the new Pepper II maze quest.

The main character in Pepper II, is an angel but he is occasionally prone to complete a Dr Jekyll and Mr Hyde transformation into a devil.

Pepper is his name and he spends his time exploring four

NOT TO BE MISSED

TIPS ON MISSILE COMMAND

Missile Command was the first arcade game to introduce a semblance of realism to video warfare.

Based around an anti-ballistic missile (A.B.M.) conflict over a number of cities, which have to be protected from bombardment, it recreates some of the horrors of a nuclear war.

It also offers such a rush of action that it can be confusing for the casual watcher. The first thing the beginner must learn is not to aim his missile sight (a cross on the screen which guides the warheads) directly on the descending missiles. This is because missiles have to be fired from ground to air and in the split second that takes, the enemy warhead will have already passed through the area of explosion.

Instead, fire just below the oncoming missiles and they will

be detonated by entering the area of explosion. Also remember that missiles from your centre base travel faster — and so are more useful — than those from the right and left bases.

The most important tactic is the scatter. Done right at the beginning of the screen when missiles are first coming down, a good scatter will halt the deadly rain of missiles, hold-up the "smart" bombs and destroy the first satellite. Use the right or left base to scatter a chain of cross marks two thirds of the way up the screen.

This will produce a curtain of explosions which takes the initial sting out of the enemy attack.

Leave one or two missiles in the base used to scatter, as these must be saved for the satellites which come out from either edge of the screen.

Satellites must be hit before they reach the middle of the screen or they will unleash a further deadly rain of missiles.

Save the centre base's missiles for warheads which have penetrated your first lines of cover. These are also useful when you have reached a score over a million. Then 14 or more smart bombs can appear on the screen. Smart bombs will hover over explosions and then continue their descent when they feel it is safe. These can only be destroyed by a direct hit, usually from the latter centre base.

On most machines, bonus cities are awarded every 10,000 points and a maximum of three can be destroyed on any one screen. If one city is left, a good strategy is to finish the screen just under your next bonus score, say 49,000. This means that in the next screen you will only need to score a 1,000 to earn your next bonus city.

Simon Lord from Nottingham, who provided us with these tips and has a high score of over 12 million in eight hours, also pointed out a common bug on the Missile Command game. When a score of 800,000 points is reached, many machines award over 80 bonus cities — this is the time to go to the loo.

PEPPER II

sections of the screen, searching for secret areas. As he travels he leaves a zipper-like track behind him. As in the game Qix, once a complete area has been surrounded by these tracks, it is filled by a brightly coloured pattern and points are awarded.

As he roams around the screen, Pepper must take care to avoid the two villains of the piece, the roaming eyes and the deadly whippersnapper.

The whippersnapper is a bright crimson enemy who will unzip any of Pepper's tracks which do not fully enclose an area. When Pepper manages to surround an area which contains a pitchfork, he jumps into a devil for a few seconds (reminiscent of Pacman).

While in his Mr Hyde form he can capture the roaming eyes for extra points but still cannot bring the whippersnapper to heel.

As in Pacman, Pepper II just has the one control, a joystick, which adds to the playability but does not detract from the excitement.

NO SITTING ON THE DOCK OF THIS BAY

PORTMAN

There's no time to sit back and take a tea-break in the dockyards of the game Portman.

In this visual game, you take the part of an overworked docker charged with the task of loading a ship which is just about to leave dock.

But you can't expect life to be too easy in arcade games and the Portman docks are plagued by a team of saboteurs who are out to disrupt the work as much as possible.

The ship's captain is also determined to make things difficult and he keeps his ship chugging backwards and forwards at the dock. The cargo is stored at the top of the screen and drops randomly earthwards. Your docker must chase after descending cargo and catch it — some pieces of cargo can only be caught on the first bounce.

A CUTE AQUATIC FAIRY TALE

DEVIL FISH

An aquatic maze made up of geometric seaweed and coral is the setting for Devil Fish.

The story behind the game reads like the wildest fairy tale.

Deep in the sea garden there was once a happy group of aquatic creatures. But one day a school of ferocious Devil Fish broke out of their prison and occupied the sea garden.

The angry King of the Sea appointed the brave Sea Dog to conquer the Devil Fish and make the sea garden a happy place again where honest aquatic creatures could swim in safety.

This scenario places Devil Fish firmly in arcade games' "cute" category but it still offers a good twist to the familiar Pacman theme.

The strange sea mazes are made up of regular width passages but with modules on them

Trucks also travel the quayside and if an item of cargo hits the truck it will cause it to stay in the same position for a few seconds obstructing your freedom of movement on the dock.

Once all the cargo is successfully loaded onto the boat between four pillars, the game moves into its second phase. In this, conveyor belts travel across the screen loaded with boxes of dynamite. The saboteurs use the conveyor belts to try and kick the boxes down onto the quayside before you are ready to catch them.

You are armed with stones which you can hurl at the saboteurs and throw up to dislodge boxes of dynamite when you feel ready to catch them. If you miss a box, it will blow away a section of the floor and soon make the dockyard disintegrate.

Once through this section of the game, you are returned to the first phase, except that it becomes increasingly difficult as the game goes on.

Three lives to play with but the union really ought to do something about the working conditions.

sides which restrict the size of creature which can pass through them.

The Sea Dog of the saga is represented on the screen by a fishy face and the Devil Fish are small blue octopus-like creatures. These grow progressively larger as the Sea Dog leads them up with bait. Eventually they get too large to pass by certain of the passage modules, and when they are stuck, Sea Dog goes back and attacks them.

When he successfully disposes of the first batch of Devil Fish a more complicated maze features on the screen as the game gets progressively harder.

IS IT A PINTABALL?

Look, up there in the arcade is it a pinball or is it a video machine? No — it's a mixture of both!

Bally's latest mechanical fantasy includes features seen on both the screens and playfields at your local arcade.

Like pinball it features drop targets and bonus scores. Like video games it employs laser blasters, alien creatures and trusty force field.

Rapid Fire — that's the name Bally have given to this hybrid creation — comes in a pinball style cabinet and has a pinball style L E O scoreboard. But there the similarity to a regular pinball vanishes.

The first thing the player will notice when he steps up to the machine are the two pistol-like grips — which control the action — at the front of the machine. With these you fire the projectiles and defend yourself with the force field button.

The grips direct the angle of fire from the four inch 'gun' barrel at the base of the machine. Out of this barrel hurtle the small metal balls which the player has to aim at targets at the back of the playfield.

The playfield itself is a flat surface covered with spear-wielding alien figures in the centre which light up as the game progresses. Down each side are ranged space tanks — ready to blast the unwary player.

The aim of the game is to hit the drop targets so that letters spelling out the word F-R-E-N-Z-Y are lit up. This puts the machine into rapid fire mode — and you can blast away at the space tanks and aliens at a rate of 480 balls per minute!

The aliens send out blasts of fire which you have to fend off using your force field.

Also featured on the machine are a laser blaster button which you can use to help boost your score — and in real moments of stress when everything seems to be lunging at you at once you can hit the panic button which brings about your salvation. But you can only use it a limited number of times.

Rapid Fire may not be a favourite with serious pinball players but it certainly offers a new challenge to all arcade addicts everywhere.

This program is based on those plastic puzzles which consist of 15 numbered plastic tiles which have to be arranged in ascending order of value. In the program the numbers are replaced by shapes which when positioned in correct order make a picture of a sail boat. This picture is displayed at the start of the program before the computer scrambles it.

Your task is to unscramble the bits and complete the picture in as few moves as possible. To do this you move pieces into the space marked with a cross.

If the section you want to move is above the space you must press M — the down key. Other keys used are U-up, H-left and K-right. There are five skill levels to the game. After you have become familiar with the method of moving the pieces you should be able to advance to higher levels which scramble the picture even more.

HAUNTED HOUSE

Listen to the children of the night — how sweet they sound. Their howls and moans echo through the gloomy corridors of the Haunted House. Once within the rambling edifice you will be confronted by many unknown horrors.

There are several rooms to explore and dangers to cope with — but you must escape. Otherwise you could be joining the inhabitants of this gothic mansion before long!

Once the door locks behind you there is only one way out — but telling you more would spoil our macabre entertainment. Useful words to use are: Go, Take, Leave, Use, Exorcise, North, South, East, West, Up, Down.

Statements 10-600 set up the arrays describing the rooms and their contents. 600-700 ties the subroutines together. 1000 handles the keyboard entry. 2000 lists what you are carrying. 3000 decodes verbs and generates the associated messages.

The author reckons the strength of his program lies in its flexibility. Any room names, object names and room contents can be changed simply by altering the statements assigning the string contents. The vocabulary will alter accordingly. The interaction between the room contents can similarly be altered and does not depend on the names contained in the arrays. Thus the body of the program can handle any number of rooms, with any interconnection, without alteration.

BREAKOUT

Here's a knock-out game for all you BBC micro owners. There's a pretty red and yellow wall at the top of the screen which Mr Hurd invites you to lay waste in the traditional time honoured fashion. Using a bat moved from side to side by the X and Z keys. There's a supply of three balls served by the space bar.

The ball speeds up when it hits a red brick and leaves the bat at a somewhat random angle, defying the laws of physics in a carefree manner. Once a complete wall has been demolished a new one appears — allowing seasoned veterans of the game to build up impressive totals on the high score display.

You can make a couple of alterations to the program if you wish. The sound effects can be improved by changing the final parameter on each SOUND call to 5. For more advanced BBC owners a further improvement could be made by using the FX commands to change the responsiveness of the keyboard.

SPACE HOPPER

BY ROSS FULFORD
RUNS ON A
TRS-80 LEVEL II
IN 16K

You could really get caught on the hop in this original graphics packed extravaganza. Space Hopper has five different stages to test your skill and dexterity. In stage one you have to leap your Hopper over buildings as they move past. You earn 10 points for each leap — and as the game progresses the gaps get smaller.

Stage two sees the appearance of a dragon type monster in the top left hand corner of the screen. This monster grows bigger as you attempt to bounce your Hopper into flying bricks which flit across the screen at random heights. Then comes stage three which sees the monster start to move across the screen. You have to land your Hopper on the monster to win points.

Stage four and a spaceship appears. You have to guide the Hopper into the landing bay. You get 500 points for a successful docking — but take care as there's not much room for error and there is a time limit.

Three other space hoppers appear for the final stage — and you have to guide your Hopper onto one of its bouncing chums. You receive 300 points for a perfect landing.

VIC 20 16K ZX81

SUBSPACE STRIKER ... It comes from out of nowhere and then vanishes back into the ether. With your deadly Animal torpedoes, you unleash havoc in the federation spacelanes.

ZOR ... Two mighty robots are designed for one purpose — to fight to the death. In the style of a medieval duel, you must do battle with the Champion of Zoi to save your planet.

ENCOUNTER ... Would you know what to do if you encountered extra-terrestrial beings. In this exciting game you are abducted by aliens and the space invaders play YOU!

STARQUEST ... A voyage of discovery and adventure in the cosmos. With the help of your onboard computer you seek a habitable planet amidst the perils of deep space.

TRADER ... A trilogy of three full 16K programmes that combine to give a fantastic 48K graphic adventure. As a galactic trader you seek your fortune and deal with some very bizarre customers indeed.

A delightful and exciting change from the usual arcade spin-offs. Full screen animated graphics like you have never seen. Good value too at only £9.50 for VIC 20 and £5.50 for ZX81 per full 16K game. Trader is £10.50 for ZX81 only at present. Ask your dealer now or write to us direct.

TANGERINE • TANGERINE

FUR TRADER

It sure was a tough life being a trapper out in the wilderness. If a great big grizzly bear didn't get you then the fierce winters would do their best to finish you off. But I don't regret a moment of it. There's nothing quite like walking into a trading post with armfuls of furs and doing a bit of haggling to get the best price.

A lot of you young whippersnappers have been asking me just what it was like chasing little furry animals around for their valuable skins. Well now you can relive those bygone days from the comfortable surroundings of your ZX81.

Among the many strange creatures you'll come across out in that desolate wasteland, are ocelots, rabbits and coyotes. There is also the little known haggis, a wondrous beastie, whose fur commands some of the best rates — if you can beat the trader up in price, that is!

You have to collect as many furs as you can and get them to the trading post. But you must take into account your supplies of food and water — and if you are getting enough sleep. Otherwise you could get into big trouble! The instructions are included in the program. Good luck and good hunting!

COUNTRYSIDE PACKMAN

You are a Rabbit in one of 2 million underground mazes, you must collect your carrots from the farmer's field before the pole cats collect you. Superb high-resolution graphics. Machine code and basic. £7.00 incl.

MISSILE COMMANDER

New York is about to be obliterated by incoming ICBMs. You must direct your Nuclear anti-missile missiles to destroy them before they wipe out the city. Classic arcade game Colour & Sound effects are Brilliant. £7.00 Incl.

TANK ZONE

Your roving tank moves around the Battlezone destroying enemy mines and installations. This game needs the quickest reflexes of all BBC games available so far. Uses machine code £5.00 incl.

They said it couldn't be done!

Galactic FIREBIRD

Those ever circling, swooping, diving Firebirds of the famous arcade machines, brought to the micro in Mike Chalk's ultimate achievement—Galactic Firebird

Yes, it's the latest in the Kansas Arcade series, but alas, his last. For Mike has been writing these right back from the original Arcade Invaders, and feels he wants a rest.

The reason being that he has always bettered his preceding program, and feels that with Firebird he has reached a pinnacle.

Many programmers of many machines have tried to emulate the arcade game, Firebird, but nobody, the Americans included, have managed to get the circling, swooping Firebirds on a computer. Until now!

It is incredible how the Firebirds peel away, circle around in numerous positions on the screen, then suddenly sweep in to attack, all the while raining down their bombs.

Even if you manage to dodge all their bombs whilst shooting them down, it is as though they realise they will not get you this way, for without warning they'll take kamikazi action and come straight for you!

Then come the Astro Blasters, shooting down a solid energy bolt, to fry you completely, in addition to their own brand of super bomb. Oh, you can fire at them, but a solitary hit will have no effect whatsoever on these nasties.

As though Firebirds and Astro Blasters are not enough, as the game progresses, come the Wagon Bombs. With no less than three hits needed to destruct! And you can't destroy them easily either, as their explosions spread.

Scores are kept of course, and there is the now expected realistic sound effects. And—wait for it—it progresses to FOURTEEN levels of difficulty! Mike's last words, "Nobody will ever get there!"

It's ONLY available direct from Kansas but at a sensible £9.50 Vat and post paid

Kansas

Kansas City Systems, Unit 3, Sutton Springs Wood, Chesterfield, S44 5XF, Tel. 0246 850357

For TANDY TRS-80 & VIDEO GENIE

As publishers [we do not rate] other people's programs we have absolute quality control and thus give an unconditional guarantee on all our software. And of course all programs are always in stock for our famed return first class post service whether ordered by cheque or credit card. Ask for a copy of our free catalogue. You won't find any 'South Coast' prices there! Access and Barclaycard welcome.

MARTIAN EXPLORER

Here's your chance to boldly go where no games player has gone before — deep into the mysterious caverns of the red planet Mars.

Fly your spacecraft through the network of weird and wonderful underground caves and tunnels — but remember you could run out of fuel. Luckily for you previous Martian explorers have left fuel dumps which you can use — if you can land safely among the rocks cavern floor.

The landing pad is coloured light green and is located on the right hand side of your screen. Once down safely your ship will be refuelled and the next cavern will appear. Points are awarded for a safe landing — based on the difficulty level and the amount of fuel you have left.

You have a display which tells you your speed and fuel the amount of fuel in your ship's tanks. If you come into land at a speed greater than 10 units you will crash. And of course you have to avoid contact with the cavern walls during your flight. You get five ships per game.

To get the action underway all you have to do is press the red button on your joystick. This ignites your ship's engines. Gravity is simulated in this program so when you release the button your craft slows down — and will gradually start to fall downwards at a gradually increasing speed.

No error loops have been included to cover the accidental flight of a spaceship off the cursor and off the screen and if this happens an error message will ensue. So you should take care not to send your craft off the screen in this way.

It is important that lines 4130 and 4140 are fed in exactly as indicated otherwise the fuel and speed indicators will appear in the wrong position relative to the dials.

Variables

LV Cavern level

LM Number of spaceship in action

S vertical speed of ship

HL HS In combination determine the horizontal speed of the ship

L Flag indicating collision of ship with cavern walls

XM0, YM0 Horizontal and vertical position of fuel indicator

XM1, YM1 Horizontal and vertical position of speed indicator

X0, Y0 Horizontal and vertical position of spaceship

SC score

FD Rate of fuel consumption

MICHAEL ORWIN'S ZX81 CASSETTES

The best software (by various authors) at low prices

QUOTES

Michael Orwin's ZX81 Cassettes Two is very good value. It contains 10 solid well designed games which work, offer plenty of variety and choice, and are fun."

from the ZX Software review in Your Computer, May 82 issue

"I had your Invaders-React cassette and was delighted with this cassette."

P. Rubythor, London NW19

"I have been wanting to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

E. H. London SW4

"I previously bought your Cassette One and consider it to be good value for money!"

Richard Ross Langley,
Managing Director,
Mine of Information Ltd

CASSETTE 1

(eleven 16 programs)

machine code

React, Invaders, Phantom aliens, Maze of death, Planet tender, Bouncing letters, Bug split

Basic:

Ching, Mastermind, Robots, Basic Hangman PLUS large screen versions of Invaders and Maze of Death, ready for when you get 16k

Cassette 1 costs £3.40

CASSETTE 2

Ten games in Basic for 16k ZX81

Cassette 2 contains Reversi, Awaraz, Laser Games, Word Mastermind, Rectangles, Graph, Roulette, Perstoon, Penny Shoot and Bun Command

Cassette 2 costs £5

CASSETTE 3

8 programs for 16k ZX81

STARSHIP TROJAN

Repeat your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supermoose

STARTREK This version of the well known space adventure game features variable Klingon mobility and graphic photo torpedo tracking

PRINCESS OF KHAL

An adventure game

BATTLE Strategy game for 1 to 4 players

KALABRIASZ World's silliest card game, full of pointless complicated rules

CUBE Rubik Cube simulator, with lots of functions including Backstep

SECRET MESSAGES This message coding program is very simple and fun

It is very fast and addictive, and is totally unlike Earth cricket in machine code. The speed is variable, and its top speed is very fast

Cassette 3 costs £5

CASSETTE 4

8 games for 16k

ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves

GUNFIGHT (machine code)

Invaders (machine code)

FUNGALOID (machine code)

GALAXY INVADERS (machine code)

Snakebite (machine code)

Eat the snake before it eats you. Variable speed (very fast at top speed)

LIFE (machine code)

A ZX81 version of the well known game

30 TIC-TAC-TOE (Basic)

Played on a 4x4 board, this is a game for the brain. It is very hard to beat the computer at it

7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman)

Cassette 4 costs £5

Recorded on quality cassettes, sent by first class post, from:
Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

Rock and roll among the planets in this intergalactic adaptation of an all action arcade game
Rocks is similar to that arcade favourite Asteroids. You control a spaceship threatened by a swarm of deadly meteorites. When you have scored 300 an alien saucer streaks across the screen and attempts to ram you. You can avoid or shoot it down.

To control your VIC ship use key 1 and 2 to turn, 8 and 9 to move left and right, 0 to fire. You can also use the spacebar to hyperspace your way out of trouble — but this will cost you 100 points each time you use it.
The main variables are SC-score, X2-shape of spaceship, RI - the rock variable, J- input from keyboard F-direction of fire

FOOTBALL MANAGER

Addictive Games

for
FMS
FMS
FMS

ADDICTIVE

- IS YOUR TEAM AS GOOD AS YOUR LEAGUE?
- PROMOTION & RELEGATION
- FULL LEAGUE TABLE
- TRANSFER MARKET
- INJURY RILLS
- 7 LEVELS OF PLAY
- FULL CLUB FACILITY
- MANAGERIAL RITING
- PICK YOUR TEAM FOR FOOTBALL LEAGUE CUP

This is NOT a mere simulation. This is an exciting and highly enjoyable game in which you play the part of a Football Manager coping with the problems and decisions involved in running your club. There are so many features it is impossible to list them here but included are team (top teams) NORMAL TV, wins, goals, injuries, wage bills to pay, and you can even be sacked! It is a game requiring a great deal of skill, and people play it for literally hours on end and I've been proved.

WE GUARANTEE that this is one of the best computer games you've ever played!

THE FOOTBALL MANAGER... this game is extremely addictive!

FOOTBALL MANAGER... this game is extremely addictive!

WE'VE GOT MIKRO GEN PRODUCTS IN STOCK — SO THERE!

Attention All BBC Microcomputer and Acorn Atom Users

If you've been looking for a reliable and regular source of information to help you make the most of your BBC microcomputer or Acorn Atom, then we've got news for you.

ACORN USER

The official monthly magazine of Acorn Computers Ltd, manufacturers of the BBC microcomputer, the Acorn Atom and the Econet system

Acorn User is a new monthly magazine starting July 1st for users of all present and future computers and systems manufactured by Acorn Computers Ltd, published by Addison-Wesley

Readers who reserve their subscriptions now will receive the July/August and September issues free

Send your cheque or postal order for £15 including postage (UK only), made payable to Addison-Wesley Publishers Ltd, to

'Acorn User'
Addison-Wesley Publishers Ltd
53 Bedford Square London WC1B 3DZ

We also accept Access/B Barclaycard/Visa/American Express/ Oneworld Club cards. Overseas subscription rates on application.

REVERSI

BY JOHN BALL

SUBTLE USE OF THUMBS

The family Reversi champion can probably tell you the "do's and don't's of the game

These are the "rules of thumb" which most keen Reversi — also known as Othello — players will stick with, even though he may not have categorised them as such.

But the expert Reversi player/programmer will also know when to break those same rules.

In the last article on computer-used Reversi (*C&VG* May) I outlined these rules. They were:

● **Board Values**, so that the nearer the corners the worse the move, but capturing corners being best. The whole game is really about capturing the corners to help you capture pieces permanently. I have included the values diagram below.

8	-9	29	5	4	4	5	29	-9
7	29	22	3	2	2	3	22	29
6	5	3	1	1	1	1	3	5
5	4	2	1	0	0	1	2	4
4	4	2	1	0	0	1	2	4
3	5	3	1	1	1	1	3	5
2	29	22	3	2	2	3	22	29
1	-9	29	5	4	4	5	29	-9
a b c d e f g h								

● **Piece capturing**, where ironically it pays to take as few as possible to reduce your opponent's choice of moves.

● **Side taking**, which helps short-term "option-battles" but is bad in the end-game, so generally avoid them.

I said that a computer program based on those three points, if carefully balanced would result in a reasonable standard of play. But of course that is not the whole story. In my book *Key To Othello*, only half a dozen of the 36 pages deal with what I now call the three thumbs. The rest deals with other finer points that are really exceptions — in other words telling you when to give the "thumbs down"

The standard board values would strongly persuade you to avoid playing next to a corner, but look at diagram one. There is one square next to a corner that is safe — due to white holding the side. So a White play at A would be far prefer-

Fig 1

able to B. B would provoke a Black reply at C, and give Black a future good play at D. So the values of the board squares change due to the position. They are not fixed.

The most obvious exception to Thumb two is near the end of the game when you need to take as many pieces as possible to win.

So at some point — say 10 moves from the end, you reverse the Thumb. That abrupt change is a bit crude, so that more subtle methods of selecting moves near the end are required.

For example, if the four squares of a corner are filled up with three pieces as in diagram two, then the empty square at E is almost certain-

Fig 2

ly a must to play in. It is White's best move, so teach the computer to spot it. Generally, any corner with an odd number of squares is preferable to one with even.

Maximum piece capture overall is thus not best judged by captures per go — even near the end.

The Japanese Othello machine seen in the shops has the major weakness of taking thumb three to extremes — it hardly ever takes sides. In diagram three, you are fast running out of options as White, so you should take the side at F.

For a computer program, you have to teach it to count "options", so that when there are few "good" moves, you make it take sides more readily before it is too late and corners have to be given away! Yet if you had plenty of good moves, taking sides would invariably be wrong — especially if it meant getting a 5 — five pieces in a row along the side.

Fig 3

Pattern Recognition

Ultimately you find exceptions to the above exceptions! This forms the basic human skill and knowledge of the experienced player.

The difficulty of transforming a good playing knowledge of Reversi into a good computer program, is that the game is so simple in format that many players find good moves by sheer instinct. It is turning that unconscious knowhow into hard and fast rules which enable you to write a worthy program.

There is a simple way of giving a computer this detailed knowledge. This is best left for another article.

ALTERNATIVE DIMENSIONS

Any video game or simulation that deals with real events and scenes has to face the problem of how it can successfully represent the real three-dimensional world on a flat two-dimensional video screen.

The eyes and brain of every person have to cope with a similar problem because we see the world only via a flat image of it produced on the retina of the eye.

The secret of representing three-dimensional images in a realistic way on a flat surface was discovered by the artists of the Renaissance in the fifteenth century.

One of the set pieces used for teaching perspective at that time was to draw a chalice, and there is a famous drawing of a chalice by Uccello in the Uffizi Gallery in Florence which bears a startling resemblance to the most modern computer-generated images.

The idea of perspective is that the cone of rays of light reflected from an object into the eye becomes narrower the further the object is from the eye. This explains why an object appears to be smaller when it is further away from one's eye.

Students of art are usually taught to deal with perspective on say a street or a straight fence, by drawing a "disappearing point" on the horizon, thus is where the houses or

Fig 2

fence would slip beyond the line of sight if they were to continue for ever. It works well on straight boulevards but more thought is needed on twisting or hilly terraces.

This idea naturally leads us to a way of representing solid objects on a flat surface. We can specify the position from which an object is being observed and the position of the flat surface on which it is to be represented as shown in figure 1.

The eye is at the origin of the coordinate system. The picture plane is parallel to the x-y plane at a distance d from the eye with its origin on the z-axis. A three-dimensional point with coordinates (x, y, z) can then be seen to correspond to the point (X, Y) in the picture plane, where

$$X = x \cdot (d/z)$$

$$\text{and } Y = y \cdot (d/z)$$

Using this perspective transformation, three-dimensional surfaces and curves can be represented by transforming points in the picture plane and joining them as appropriate.

A three-dimensional surface can be represented mathematically by an equation such as:

$$z = x^2 \cdot y^2$$

or, more generally, by any equation giving z in terms of x and y. If the x-y plane is taken as horizontal, then for every point (x,y) in this plane, the height, z, of the surface above the plane is given by such an equation.

A surface can be represented by a 'wire-frame' model obtained by taking a rectangular grid in the x-y plane, calculating the height of the surface above each cross point of the grid and then joining these surface points. A part of the surface $z = x^2 \cdot y^2$ drawn in this way is shown in figure 2.

A three-dimensional curve can be defined by the intersection of the

Fig 3

two surfaces, and so it can be given mathematically by the equations for a pair of surfaces. Any point lying on two surfaces at the same time must be on the curve in which they intersect each other. Part of the helix given by:

$$x = \cos(z/2)$$

$$\text{and } y = \sin(z/2)$$

is shown in figure 3 from several points of view.

Fig 1

KAYDE Electronic Systems ZX80/1 ZX KEYBOARD WITH REPEAT KEY

£37.95
inc VAT

- Fully cased keyboard £37.95
Uncased keyboard £27.95
Keyboard Case £10.95

This is a highly professional keyboard using executive buttons as found on top quality computers. It has a repeat key and comes complete in its own luxury case. This is a genuine professional keyboard and should not be confused with toy keyboards currently available on the market.

KAYDE 16K RAM PACKS

The 16K RAMPACK simply plugs straight into the user port at the rear of your computer. It is fully compatible with all accessories and needs no extra power and therefore it will run quite happily on your Sinclair power supply. It does not over-heat and will not lose memory at all. As you may know some makes go down to 11K after being on for a while.

This 16K RAMPACK is very stable and will not wobble or cause you to lose your programme. It comes fully built and tested with a complete money back guarantee.

£29.95
inc VAT

KAYDE FLEXIBLE RIBBON CONNECTOR

**Stops movement of RAM PACK and other accessories
(Not needed with a KAYDE RAMPACK)**

£12.95
inc VAT

KAYDE 4K GRAPHICS BOARD

The KAYDE Graphics Board is probably our best accessory yet. It fits neatly inside your ZX81. It comes complete with a pre-programmed 4K Graphics ROM. This will give nearly 450 extra graphics and with the inverse makes a total of over nine hundred.

The KAYDE Graphics Board has facilities for either 2K of RAM (for user definable graphics) 4K of ROM or our 4K Tool Kit Chips that will be available shortly. All the graphics are completely software controlled therefore they can be written into your programmes. Here are a few examples:
A full set of space invaders — Puckmen — Bullets, Bombs — Tanks — Laser Beams and Alien Ships.

£29.95
inc VAT

NO EXTRA POWER NEEDED

KAYDE 16K GRAPHICS BOARD SOFTWARE

PUCKMAN The only true ZX version of the popular arcade game.
CENTIPED "In all, I think this is the best presented moving graphics program I've yet seen" — Phil Garratt
Interface
SPACE INVADERS The best version available anywhere. Graphics software can only be used with a graphics board.

GAMES SAY

Many game of chance players — generals, admirals, investors and habitués of gambling casinos — believe in luck. Good luck to them, but bad luck to those they command or whose money they invest.

Games, love and war can only be understood in terms of human behaviour (subjectively), machine behaviour (relatively objectively) or mathematically (with total objectivity).

The latter method can provide an understanding of all three, thanks to newly discovered mathematical techniques which merely confirm what some people have felt all along — although they usually get into terrible pub arguments.

The new mathematics of games ends such arguments because you can't argue with the facts.

For one thing the new mathematics demonstrates that luck and chance are human superstitions believed by those who want to evade responsibility for their own actions.

Let's start by pitching pennies — by hand or by computer. No luck is ever involved there. It all depends on whether or not you know what you and your game partner — human or computer — are doing.

If neither knows what he is doing, first one and then the other may win for a while. If both pitch pennies in a random, mindless manner for long enough, that game will end in a draw.

But if both players are perfect craftsmen and know how to manipulate the coin with precision, each will get what he wants every time.

That's also a draw. The only genuine victory that can be achieved is when one player knows how to manipulate the coin perfectly and the other can't, and doesn't believe that this can be done.

The same principle holds true for war games and for actual warfare. All wars are based on dirty tricks. They constitute the only winning strategies — just as in pitching pennies. The idea in war is to create maximum confusion for the opponent so that he makes mistakes. Then you move in for the kill.

To try winning by brute force is stupid, expensive and eventually fatal. No one can keep that up forever, whether it's Alexander the

You are in the heads of chance only if you believe in luck, according to ARNOLD ARNOLD. In this article he examines so-called games of chance — whether they are played on computers, on game boards or on the stock market

Great, Genghis Khan, Napoleon or Adolf Hitler.

But the available variety of dirty tricks is sufficiently great so that they will wear out and defeat any aggressor, no matter what he does, provided he can't wipe you out with the first blow.

Unless that occurs — and it is rare or impossible, except in nuclear war — he who strikes the first blow, or makes the first move in any game, suffers a severe numerical disadvantage. That disadvantage is precisely equal to the number of turns he enjoys, unless he knows how to play perfectly. This is a mathematically based

statement. Anyone can verify it by comparing the sum of choices available to the first moving player in Noughts and Crosses.

This disadvantage declines towards the end of the game, but then it doesn't matter any more. The game ends in a draw when the first moving player's numerical disadvantage declines to zero.

These facts are even true for games that are traditionally known as games of chance and luck. As every poker player knows, the player who makes the first bet is said to be under the gun. That is a very big disadvantage.

Given the new mathematics of games and a little self-discipline, anyone can win steadily and consistently at roulette, or any other so-called game of chance, unless the table is fixed, the croupier knows how to manipulate ball and table with relative precision, or the betting rules are rigged.

Except for random programming — that is nonetheless limited — or deliberate exclusion of certain combinations, computers can't be made to cheat. The limits of systematic machine randomization can now be defined mathematically.

That poses a threat for many who write game programs and for gambling casinos, but only from knowledgeable players who are first rate mathematicians. The possibilities for human cheating may seem endless.

But even such cheating has its limits. Once all cheating methods are known, no-one can ever take advantage of anyone else.

One of the so-called winning plays in what were believed to be games of chance consists of temporary alliances that are dissolved as soon as convenient. Then you turn on your former ally when he least expects it. That is virtually the only way to succeed at Monopoly, Risk and in other games in which such strategies are not expressly forbidden by the rules. But these realistic policies are difficult to apply in computer games, unless specifically allowed for in the program.

As in the previous article which dealt with Space Invaders, the difference between defensive and attack strategies become clear. As far as any attacker is concerned anything goes.

Defenders are best off with those they can count on to remain loyal, come what may. None of this involves any moral judgments. These are mathematically verifiable facts which are confirmed by experience.

The trouble with war games is that one wonders to what they lead?

What is won when the opposition is wiped out? In real life there is then no one with (or against) whom to play. In games, one war game can only lead to another. No chance, luck or fate is ever involved in either case.

THE DESK TOP GENIUS.

Now from Sharp, the Sharp MZ 80A. A personal computer that is ready to run the moment you own it. Because the CRT display, the typewriter-style keyboard and the cassette-based data storage are all integrated into one complete system that leads the operator, either amateur or professional, into an incredible new computer world.

For this computer has the power to do virtually anything within the range of Personal Computers. In it, Sharp has combined

MZ 80P6
Character Graphic Printer
Also available MZ 80P4 and MZ 80P5

MZ 80FB
Twin Mini Floppy Disc Unit

all its fine electronic technology in the field of information engineering to create a marvel of precision. Plus, when you purchase you get a valuable software package absolutely free.

The superb Sharp MZ 80A. Among its competitors, it is rated as a genius. To you, it will become a desk-top companion you will treasure, an invaluable part of your daily life.

Bringing to your school, office or home, the high-speed skills and advanced technology of the world of Sharp. Where great ideas come to life.

Specifications MZ 80A

CPU	Z 80
Memory	4K-byte ROM 48K byte RAM, + 2K byte Video RAM
Display	9 inch (23 cm) 40 characters x 25 lines Green screen
Cassette	Manual control, standard audio cassette tape Data transfer (Sharp PWM system) 1 200 bits/sec
Keyboard	ASC11 keyboard, upper/lower-case alphabet, graphic symbols, numeric keypad
Other features	Built in clock and music function Auto repeat on all keys 2-page video RAM (allows the screen to be scrolled up and down) *CP/M available

Printer specifications	Optional Printers		
	MZ 80P4	MZ 80P5	MZ 80P6
Printing method	Serial impact dot matrix		
Feed method	Variable sprocket, Friction	Variable sprocket	Variable sprocket, Friction
Kinds of characters	230		
Character make-up	9(W) x 8(H) dot matrix (normal: 12 char/80 lines)		
Number of digits	136/68 per line 160/80 per line	80/40 per line 136/68 per line	
Printing speed	150 cps (100 mail, 12 characters)	60 cps (normal eye transference)	
Head sweep direction	Bi-directional		
Other functions	<ul style="list-style-type: none">• Software-controlled full graphic function• Programmable number of lines per page• Battery-operated memory of HOME position (MZ 80P4 only)		

Design and specifications subject to change without notice

Floppy Disc Unit (MZ 80FB)

Two drives per unit, 5 25" dual-sided, double density, 70 tracks soft sectored, 16 sectors per track

Memory capacity 280K bytes per diskette

PERSONAL COL

LONELY Genie 1 Microcomputer, early eighties, with large peripheral family but currently unattached, would like to meet interesting, attractively packaged software, Genie or Tandy specification, for programming, problem solving, entertainment and long-lasting friendship. Reply in confidence. Box No RS232.

ANSWERING MACHINES
Office certified

ingenious ...but lonely!

Buying your first Genie 1 microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box**, which immediately expands your Genie's capacity to 32K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or S100 cards.

Then there is the **Printer**, a compact unit with 80 column, 5 x 11 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

The **Disk Drive** gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter. New Dual Disk Drive now available!

Finally, there is Genie's very own **12" Monitor**, a must if you want to let the rest of the family watch their TV in peace! Available in B & W or green tube.

The supreme advantage of the Genie 1 system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

**SPECIAL TECHNICAL GENIE
HOT - LINE ON 0629 4995**

For all your technical advice and service back-up on any Genie 1-related problem, call any weekday 10am-6pm

THE KEYBOARD QUESTION

For the unadventurous, replacing the keyboard on the Sinclair machines can seem a daunting task.

There is a large selection of possible keyboards now available, for the ZX81 in particular, and it can be confusing to decide exactly what you need from the keyboards and how much hardware you wish to fit inside the case.

Most of the models currently on the market have been produced in the same form for some time. They are usually about three-quarters of the size of a normal QWERTY keyboard which makes them especially attractive to users of the ZX81 who wish to keep their system as compact as possible. The case provided with many of the keyboards are even large enough to house the ZX81 itself.

Unfortunately, for those who regularly use a full size keyboard, and are familiar with its "feel" there is, as far as I know, no alternative. That is, unless you are prepared to do a little modifying with knife and soldering iron. There are available, I know, several versions of unencoded matrix keyboard but as Sinclair uses a non-standard matrix, as

tions will be effected by wire links. This will make your job all the easier, as all you will have to do on this side is to rearrange the links. The trouble will come when the tracks on the bottom of the board have to be changed.

Fortunately, here, the most frequently used means of key connection is by soldering a fine wire in a very large plated-through hole. This will, as a consequence, mean that there will be plenty of room for the new connecting wires when you come to reassemble the board. After unsoldering the keys the next and most important step to take is to make a sketch of the board and all the usable connections.

It is no good rewiring the board and then finding out that you have made a wrong connection somewhere. It will invariably be in the most inconvenient place, according to Murphy's Law, chapter two.

Once you have convinced yourself that you have the matrix right, and you can refer to the diagram in last month's edition, the offending tracks must be cut and replaced by wire links. Do not remove the track at all, but cut through it with a very sharp knife. This will allow you, if you wish, to modify the board later to a different matrix without much trouble. I prefer to use single-stranded wire for this type of job but multistranded will do. Try to make the links as short as possible

you use the same sort of socket. These, fortunately, are generally available from "most good stores", as is the connecting strip.

The modification above can, of course, be made on almost any type of keyboard, even the encoded type, which normally has an RS232 output. This would become redundant if the matrix is changed, though. These keyboard are, however very expensive for a straight modification and it is possible to alter them for both forms of operation. This is a very tricky job as the matrix must work in both systems and should only be undertaken by those who know how the UART (look it up) functions.

Of course, second hand keyboards are available in junk shops and at computer bring-and-buy sales and many other places. These are ideal to practice on as they are cheap (as little as £5) for the associated electronics are often defunct.

You can make the most of the board by fitting extra sockets to take joysticks and other associated add-ons. Also, the boxes for these keyboards are large enough to take the machine, the power supply and the memory pack if you wish.

You would then be left with only the printer and any other controls you yourself had added, to carry separately.

shown last month, these are not suitable in their original form.

If you contemplate buying a full size keyboard for your ZX80/81/Spectrum try to get one in kit form. This will save you the job of having to unsolder all or most of the keys when you come to modify the matrix, as the connecting tracks are often on both sides of the board. If you are very lucky the top connec-

tion and as close to the board as you can — this will ensure the machine is robust.

On the board there should be a connector of some sort that would have taken the signal from the original matrix. You may decide to use this one or one of your choice. Whichever it is you will find it difficult to attach the same type of connector as is used by Sinclair unless

PRACTICAL PROGRAMMING

DO YOU TALK TO YOUR USERS?

Even some professional software tapes fall down in the vital area of communicating with the person who will end up using them.

Communicating instructions or other help in deciding what the computer next expects of its player is an important part of the games program and should be built into the program at an early stage.

There are two types of input routine: in the first type the program looks to see if an input is ready and continues if there is not, in the second the program stops until an input is ready.

The two forms are implemented in Basic by GET or INKEY\$ for the first and INPUT for the second, although there are other differences.

GET and INKEY\$ are extensively used in interactive action games, where the display and the state of the game must be continuously up-

```
1000 GET A$
1010 IF A$ = "L" THEN GOTO 2000
1020 IF A$ = "R" THEN GOTO 2100
1030 IF A$ = "U" THEN GOTO 2200
1040 IF A$ = "D" THEN GOTO 2300
1050 IF A$ = "F" THEN GOTO 2400
1060
```

According to the key pressed the program will branch to a routine to perform the appropriate action; if no key is pressed or if the key pressed has no defined function the program will continue.

WHICH KEY DOES THAT?

An important consideration in this type of program is the actual specification of which key does what. The keys and their functions should be easy for the player to remember; the above example satisfies this criterion if L, R, U, D, F stand for "move left", "move right", "move up", "move down", "fire". It is less satisfactory to use, say, the digits 1, 2, 3, 4, 5 as there is no immediate connection between the digit and

left, right, up, down, and are easily remembered by their positions relative to 5. The keys 7, 9, 1, 3 can also be used for movement in the appropriate direction.

Another possibility is to use cursor control keys, if they are available, to implement directional movement.

IMMEDIATE RESPONSE

In the action games, considered above, the program responds to one key at a time and the response is immediate. The player is given no chance to correct an error, but since such games are mainly a test of speed and dexterity pressing the wrong key is one of the hazards of the game. However, in strategy games and data processing applications we need a different approach to errors.

As an example, consider the problem of checking the player's move in a game of chess. A standard format for specifying the squares on the board and the moves is to label the columns, from left to right, with the letters a to h, and the rows, from bottom to top, with the digits 1 to 8.

A square is specified by the column letter and row digit, and a move is specified by giving the starting square and finishing square of the move.

For example, e2 is the square at the fifth column and second row, e4 is the square at the fifth column and fourth row, and e2e4 means move the piece on square e2 to square e4, as an opening move this would be, in another standard chess notation, P-K4, pawn to king four.

THE CHECKING PROCESS

The checking process can be divided into two parts: first, checking that the input string has a valid form for the specification of a move, and second, checking that a valid form specifies a legal move accord-

dated whether or not the player has done anything, while INPUT is more often used in games where turns alternate or in applications where the program processes data that is typed in.

In an interactive action game there is usually little difficulty in processing the result from a GET or INKEY\$ instruction. It is often possible to have a single routine to handle the player's responses, which will work something like the following:

the corresponding action and the player will have to learn arbitrary key values before he can really get into the game.

On machines with a numeric keypad separate from the main keyboard the keypad is often used to define direction of movement. With the standard layout:

789
456
123
0??

The keys 4, 6, 8, 2 can be used for

BY TED BALL

PRACTICAL PROGRAMMING

ing to the rules of the game.

To use some jargon, the first part of the checking process is a "syntactic" problem, while the second part is a "semantic" problem. The distinction is that syntax refers to form while semantics refers to meaning.

In general, syntactic problems are much simpler than semantic problems, and this is certainly the case in checking a chess move. The syntax for a move can be defined precisely as requiring exactly four characters of which the first and third are letters from a to h and the second and fourth are digits from 1 to 8. This can easily be checked by a simple routine, for example:

```
1000 IF LEN (M$) < 4 THEN
GOTO 2000
1010 IF MID$(M$, 1, 1) < "a" OR
MID$(M$, 3, 1) > "h"
THEN GOTO 2000
1020 IF MID$(M$, 2, 1) < "1" OR
MID$(M$, 4, 1) > "8"
THEN GOTO 2000
```

where line 2000 is the start of the error report routine.

ARE YOU SURE THAT'S LEGAL?

The semantic problem of deciding if a syntactically correct move is legal is much more complicated; too complicated to deal with fully here.

A little thought will reveal some of the things that must be checked: does the player have a piece on the first square specified; is the second square vacant; if the second square is occupied is it occupied by one of the player's pieces or one of the computer's pieces; does the move expose the player's king to check.

If a chess program is to be effective the routine that checks a move for legality must be thorough and efficient as the main use made of such a routine will not be checking that the player's moves are legal but in generating possible moves for the program. When the program is testing many lines of play for several moves ahead the move generator may be used thousands of times and must be very fast to avoid

Android Nim: "Get a move on we haven't got all day!"

unacceptably long times for deciding on moves.

In game programs where the rules and the format of the input are precisely defined it is always possible to make a complete check on the input for validity and legality, and thus should always be done. A program should never accept an invalid move and all invalid inputs should be trapped by checking routines written into the program and not left to the programming language or operating system.

For example: in a gambling program if you try to bet 100 when you only have 50 the program should detect this and give a message like "You don't have that much, try again". If the program accepts the 100 it may later try to use the -50 left after subtracting 100 from 50 in an expression where negative numbers are inadmissible.

In that case you would get a system error message, "Function call error in 1234," or something similar. The program would then terminate and the machine would go back to Basic command mode, which could be confusing to someone who does not write programs and only uses his computer to run pre-recorded programs, and would be annoying to someone who had typed in 100 when he meant 10 and has been given no chance to correct his mistake.

In game programs, failing to trap an invalid input is at most annoying to the user but in serious business

and scientific applications it could be disastrous.

Although a games magazine is not the place to discuss such applications every programmer should appreciate the importance of data validation.

THE POLITE COMPUTER

As a corollary to the trapping of errors we should also give some thought to the form of the error messages given after an error has been detected. All messages from a program should be informative and polite.

In some cases it may be sufficient to say simply "Error" or "Invalid command", in other cases it may be necessary to be more specific, for example in chess suitable error messages may be "That move would put you in check" or "You already have a piece on E4".

Regarding politeness in error messages you often find messages like:

"You can't go there, you rotten cheat" or, (a real example) in Android Nim, if you are slow in making a move you will be told: "Get a move on, we haven't got all day".

Such things may be amusing the first few times you see them but by the 100th time they are just annoying.

MEMOTECH Explores the Excellence of your ZX81

THIS MONTH -
**2 NEW
PAKs!**

CENTRONICS I/F

MEMOPAK 16K

MEMOPAK 64K

MEMOPAK 32K

**MEMOPAK
32K RAM**
Operates in tandem
with Sinclair 16K Ram
to give a full 48K!

Memotech's Memopak Range

All five of the currently available Memopaks are housed in elegant black anodised aluminium cases, and are styled to fit wobble-free onto the back of the ZX81, allowing more add-ons (from Memotech or Sinclair!) to be connected

£68⁷⁰

plus VAT

MEMOPAK 64K MEMORY EXTENSION

The 64K Memopak extends the memory of the ZX81 by 56K, and with the ZX81 gives 64K, which is neither switched nor paged and is directly addressable. The unit is user transparent and accepts commands such as 10 DIM A(9000).

Breakdown of memory areas: 0-8K Sinclair ROM; 8-16K This area can be used to hold machine code for communication between programmes or peripherals; 16-64K A straight 48K for normal Basic use.

£43⁴³ / £26⁰⁰
32K plus VAT

MEMOPAK 32K and 16K MEMORY EXTENSIONS

These two packs extend and complete the Memotech RAM range (for the time being!) A notable feature of the 32K pack is that it will run in tandem with the Sinclair 16K memory extension to give 48K RAM total.

£52⁰⁰

plus VAT

MEMOPAK HIGH RES GRAPHICS PACK

HRG Main Features — • Fully programmable Hi-Res (192 x 248 pixels) • Video page is both memory and bit mapped and can be located anywhere in RAM • Number of Video pages is limited only by RAM size (each takes about 6.5K RAM) • Instant inverse video on/off gives flashing characters • Video pages can be superimposed • Video page access is similar to Basic plot/unplot commands • Contains 2K EPROM monitor with full range of graphics subroutines controlled by machine code or BASIC function

£34⁷⁰

plus VAT

MEMOPAK CENTRONICS TYPE PARALLEL PRINTER INTERFACE

MP Main Features — • Interfaces ZX81 and parallel printers of the Centronics type • Enable use of a range of dot matrix and daisy wheel printers with ZX81 • Compatible with ZX81 Basic, prints from LIST, LPRINT and COPY • Contains firmware to convert ZX81 characters to ASCII code • Gives lower-case characters from ZX81 inverse character set

Coming Soon...

A complete range of ZX81 plug-in peripherals

Digitising Tablet RS232 Interface

Flags are objects seldom found in Adventure games, but they often play a useful part hidden in the program. We will arrange for an array C(n) to provide a flag for each object, and its value to be negative if the object must not be taken.

Consider a location numbered (say) 4, a garden. Lying around innocently at other locations will be found a SPADE (object No. 5), a BEAN (No 9), a BUCKET (No. 12) and a pond. Figure 1 will remind you of the relevant variable names.

The objective will be to dig a hole, plant the bean, and grow a beanstalk. Before it can grow to its full height it must be watered.

The command DIG will return a value of K1 when decoded and via an ON K1 GOTO (line no) statement, control will pass to line (say) 5000: 5000 REM 'DIG' ROUTINE
5010 IF P(5)< >50 THEN LET Q1\$="NOTHING TO DIG WITH": GOTO 100
5011 REM THE FOOL FORGOT THE SPADE!
5020 IF LN< >4 THEN LET Q1\$="NOT HERE!": GOTO 100
5021 REM MUST BE IN GARDEN
5030 IF C(5)< >2 THEN LET Q1\$="NOT AGAIN!": GOTO 100
5031 REM ONLY ONE HOLE PERMITTED

VARIABLE

LN
K1
K2
Q1\$ & Q2\$
R3\$
O\$ (n)
P(n)
C(n)

ALREADY GROWN
```

If he took the right steps the player has now grown a beanstalk. We have prevented him from making any mistakes, and forced him to grow it exactly as we wanted ... Hey Presto!

DEALING WITH THE WIZARD ...

I typed "RUN" and "ARE YOU A WIZARD?" flashed on the screen. "YES", I lied.

"ENTER THE PASSWORD" commanded the computer. A wrong guess caused the Atom to call me a charlatan and terminate the game.

Next time round I admitted that I wasn't really a wizard, and found myself on a twisty road through a dense forest.

A hardy Adventurer will rarely venture anywhere exciting without a lamp, keys, and an axe. As I had now collected these essentials I guessed it must be time to enter the cavern up the road. But how to get in? The entrance was closed, and no amount of violence to the rocks and doors helped. An extensive search for an alternative way in proved fruitless.

The computer suddenly an-

nounced "YOUR NEXT MOVE IS SO OBVIOUS I SHALL NOT MENTION IT" — so I cried "HELP". The Wizard was obviously still sulking from my earlier deceit, and refused.

I promptly typed in a short sharp phrase suggesting what should be done to the wizard, and to my dismay I read "THE DENIZENS OF THE ADVENTURE HAVE DELICATE EARS. GAME ENDED BY ORDER OF THE PROGRAMMER, J. SPILSBURY".

Eventually, of course, I got in to the cavern. The method was so obvious I shall not bother to tell you!!

Atom Adventure from Program Power is in Basic and requires 12K of memory. The game's speed of execution was disappointing but this was more than compensated for by the game's chatty manner and novel turn of phrase.

by KEITH CAMPBELL

New ZX81 Software from Sinclair.

A whole new range of software for the Sinclair ZX81 Personal Computer is now available - direct from Sinclair. Produced by ICL and Paion, these really excellent cassettes cover games, education, and business/household management.

Some of the more elaborate programs can only be run on a ZX81 augmented by the ZX 16K RAM pack. (The description of each cassette makes it clear what hardware is required.) The RAM pack provides 16-times more memory in one complete module, and simply plugs into the rear of a ZX81. And the price has just been dramatically reduced to only £29.95.

The Sinclair ZX Printer offer full alphanumeric and highly-sophisticated graphics. A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. So now you can print out your results for a permanent record. The ZX Printer plugs into the rear of your ZX81, and you can connect a RAM pack as well.

Games

Cassette G1: Super Programs 1 (ICL)
Hardware required - ZX81.
Price - £4.95

Programs - Invasion from Jupiter, Skittles, Magic Square, Doodle Kilm, Liquid Capacity.
Description - Five games programs plus easy conversion between pints/gallons and litres.

Cassette G2: Super Programs 2 (ICL)
Hardware required - ZX81.
Price - £4.95.

Programs - Rings around Saturn, Secret Code, Mindboggling, Silhouette, Memory Test, Metric conversion.
Description - Five games plus easy conversion between inches/feet/yards and centimetres/metres.

Cassette G3: Super Programs 3 (ICL)
Hardware required - ZX81.
Price - £4.95

Programs - Train Race, Challenge, Secret Message, Mind that Matter, Character, Doodle, Currency Conversion.
Description - Five games plus currency conversion at will - for example, dollars to pounds.

Cassette G4: Super Programs 4 (ICL)
Hardware required - ZX81.
Price - £4.95.

Programs - Down Under, Submarines, Doodling with Graphics, The Invisible Invader, Reaction, Patrol.
Description - Five games plus easy conversion between miles per gallon and European fuel consumption figures.

Cassette G5: Super Programs 5 (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £4.95.

Programs - Martian Knock Out, Graffiti, Find the Mala, Labyrinth, Drop a Brick, Continental.
Description - Five games plus easy conversion between English and continental dress sizes.

Cassette G6: Super Programs 6 (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £4.95.

Programs - Galactic Invasion, Journey into Danger, Create, Nine Hole Golf, Solitaire, Daylight Robbery.
Description - Six games making full use of the ZX81's moving graphics capability.

Cassette G7: Super Programs 7 (ICL)
Hardware required - ZX81.
Price - £4.95.

Programs - Racetrack Chase, NIM, Tower of Hanoi, Docking the Spaceship, Golf.
Description - Six games including the fascinating Tower of Hanoi problem.

Cassette G8: Super Programs 8 (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £4.95.

Programs - Star Trail (plus blank tape on side 2).
Description - Can you, as Captain Church of the UK spaceship Endeavour, rid the galaxy of the Klingon menace?

Cassette G9: Biorhythms (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - What are Biorhythms? Your Biorhythms.
Description - When will you be at your peak (and trough) physically, emotionally, and intellectually?

Cassette G10: Backgammon (Paion)
Hardware required - ZX81 + 16K RAM.
Price - £5.95.

Programs - Backgammon, Dice.
Description - A great program, using fast and efficient machine code, with graphics board, rolling dice, and doubling dice. The dice program can be used for any dice game.

Cassette G11: Chess (Paion)
Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Chess, Chess Clock.
Description - Fast, efficient machine code, a graphic display of the board and pieces, plus six levels of ability, combine to make this one of the best chess programs available. The Chess Clock program can be used at any time.

Cassette G12: Fantasy Games (Paion)
Hardware required - ZX81 (or ZX80 with 8K BASIC ROM) + 16K RAM.
Price - £4.75.

Programs - Penlous Swamp, Sorcerer's Island.
Description - Penlous Swamp: rescue a beautiful princess from the evil wizard Sorcerer's Island you're marooned. To escape, you'll probably need the help of the Grand Sorcerer.

Cassette G13: Space Raiders and Bomber (Paion)
Hardware required - ZX81 + 16K RAM.
Price - £3.95.

Programs - Space Raiders, Bomber.
Description - Space Raiders is the ZX81 version of the popular pub game Bomber, destroy a city before you hit a sky-scraper.

Cassette G14: Flight Simulation (Paion)
Hardware required - ZX81 + 16K RAM.
Price - £5.95.

Program - Flight Simulation (plus blank tape on side 2).
Description - Simulates a highly manoeuvrable light aircraft with full controls, instrumentation, a view through the cockpit window, and navigational aids. Happy landings!

Education

Cassette E1: Fun to Learn series - English Literature 1 (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Novelists, Authors.
Description - Who wrote 'Robinson Crusoe'? Which novelist do you associate with Father Brown?

Cassette E2: Fun to Learn series - English Literature 2 (ICL)
Hardware required - ZX81 + 16K RAM.
Price - £6.95.

Programs - Poets, Playwrights, Modern Authors.
Description - Who wrote 'Song of the Shirt'? Which playwright also played cricket for England?

Cassette E3: Fun to Learn series - Geography 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Towns in England and Wales Counties and Capitals of Europe.
Description - The computer shows you a map and a list of towns. You locate the towns correctly. Or the computer challenges you to name a pinpointed location

Cassette E4: Fun to Learn series - History 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Events in British History British Monarchs
Description - From 1066 to 1981, find out when important events occurred. Recognise monarchs in an identity parade

Cassette E5: Fun to Learn series - Mathematics 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Addition/Subtraction Multiplication/Division.
Description - Questions and answers on basic mathematics at different levels of difficulty

Cassette E6: Fun to Learn series - Music 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Composers Musicians
Description - Which Instrument does James Galway play? Who composed 'Peter Grimes'?

Cassette E7: Fun to Learn series - Inventions 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Inventions before 1850
Description - Who invented television? What was the 'dangerous Lucifer'?

Cassette E8: Fun to Learn series - Spelling 1 (ICL)

Hardware required - ZX81 + 16K RAM
Price - £6.95

Programs - Series A1-A15 Series B1-B15
Description - Listen to the word spoken on your tape recorder, then spell it out on your ZX81 300 words in total suitable for 5-11 year olds

Business/household

Cassette B1: The Collector's Pack (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £9.95.

Program - Collector's Pack, plus blank tape or slide 2 for program/data storage
Description - This comprehensive program should allow collectors (of stamps, coins etc.) to hold up to 400 records of up to 6 different items on one cassette. Keep your records up to date and sorted into order

Cassette B2: The Club Record Controller (ICL)

Hardware required - ZX81 + 16K RAM.
Price - £9.95

Program - Club Record Controller plus blank tape on side 2 for program/data storage.
Description - Enables clubs to hold records of up to 100 members on one cassette. Allows for names, addresses, 'phone numbers plus a lot of additional information - eg type of membership.

Cassette B3: VU-CALC (Psion)
Hardware required - ZX81 + 16K RAM
Price - £7.95.

Program - VU-CALC.

Description - Turns your ZX81 into an immensely powerful analysis chart. VU-CALC constructs, generates and calculates large tables for applications such as financial analysis, budget sheets, and projections. Complete with full instructions

Cassette B4: VU-FILE (Psion)

Hardware required - ZX81 + 16K RAM.
Price - £7.95.

Programs - VU-FILE. Examples
Description - A general-purpose information storage and retrieval program with emphasis on user-friendliness and visual display. Use it to catalogue your collection, maintain records or club memberships, keep track of your accounts, or as a telephone directory

How to order

Simply use the FREEPOST order form below and either enclose a cheque or give us your credit card number. Credit card holders can order by phone - simply call Camberley (0276) 66104 or 21282 during office hours. Either way, please allow up to 28 days for delivery, and there's a 14-day money-back option, of course

WARTIME FLIGHTS OF FANCY

London's safety rests on your tactical ability as commander of crack fighter squadrons as you fight the Battle of Britain.

Nine fighter squadrons are at your disposal to beat off attacks from nine German bomber squadrons. Each bomber follows a different route towards its destination. If 100 or more German planes reach London the battle is lost.

The computer allows you to send instructions to individual squadrons and it controls the movement of British and German forces. But there are no graphics. To follow this wargame simulation you must use a map.

I am sure this will deter many potential buyers of the game and it certainly detracts from its realism. A sketch map showing the starting positions of the British forces is provided along with the cassette — which loaded last time — and the fairly comprehensive instruction leaflet.

The controls are easy to use, but you can't spend very long deciding what to do next. The program continually updates the squadron positions and status

BATTLE OF BRITAIN

This, coupled with the fact that you are meant to use counters or a marker pen to follow the movements of the squadrons on the map, does not make the game very easy to play.

Commands you can send to your squadrons are: scramble, patrol, report, return to base and change course. You must follow each command with a squadron number.

If a British fighter comes within live kilometres of a German

bomber an aerial battle occurs.

One minor criticism is that the computer simply displays the word "attacking" when squadrons are locked in combat and all contact is lost.

British fighters have to return to base for refuelling. A problem which does not plague the enemy forces as they are equipped with long range fuel tanks.

Battle of Britain may appeal to the keen wargamer but it will be of little interest to the average ZX81 user, due mainly to the lack of graphics and the fact that the

game must be followed on a map. It is difficult to develop a good strategy, and the game generally lacks realism.

The program is also poorly written but with considerable reworking it could be made into a stimulating simulation.

Battle of Britain runs on a 16K ZX81 and is available from Cambridge based Microgame Simulations for £4.95.

WHAT'S ALL THIS THEN?

MURDER AT AWESOME HALL

If you have ever had the inclination to be a detective, Murder at Awesome Hall will give you the opportunity to test your powers of deduction.

Written for the Atari 400/800 computers, Murder at Awesome Hall is very similar to the board game Cluedo.

Your job is to discover who murdered Colonel Awesome, which of the 20 rooms the murder was committed in and which weapon was used.

To assist in solving the mystery, you are provided with an on screen floor plan of both the ground floor and the first floor.

After entering a room, pressing Q allows you to discover who or what is in the room. If the room entered contains one of the Colonel's associates, you can question that person.

You can also consult your detective notes which list the contents of the rooms you have visited and the answers to your

questions. By pressing L, a list of suspects and weapons will appear.

The computer will occasionally give you extra clues.

When you think you have the case solved press C on the

keyboard. This allows you to type in your answer, but be careful — if your answer is wrong 5 points will be deducted.

You then have the option of having another try at solving the murder or giving up.

The game is not visually exciting and rapidly becomes boring.

Murder at Awesome Hall costs £14.50 from Calisto Software and requires 16K.

I WANT CANDY!

CANDY FLOSS

When the sun is shining on Blackpool beach and Mum has only enough money for just one whispy sugary delight six-year-olds dream of becoming candy floss magicians.

Candy Floss will either make that dream come true or turn it into a nightmare of bad weather, miserable clientele and disruptive donkeys.

Candy Floss sets certain parameters for you to discover a recipe by trial and error, for success on the beach. You are given the cost of basic raw materials (sugar), the cost of advertising posters, and an accurate weather report. You have to decide how much candy to make, how many advertising posters to sell and at what price to offer your wares.

It comes, for the BBC model A or B, with a professional Star Trek program on the same cassette. All for £5.95 from Blackpool based IJK Software.

JOURNEYS IN TIME AND SPACE ADVENTURE

From dingy dungeons to interstellar space, Acornsoft tempt you to travel these extremes with their Adventure package for the 12K Atom.

Attractively packaged within a hard book type cover it stimulates the imagination with visions of wondrous worlds and fantastic deeds. All instructions for loading, running and playing and a brief outline of the three scenarios capable of being set up are included.

The program is loaded in three stages, the first being a file index read direct to screen, allowing tests for correct playback volume. Next, Advent is "LOADED". Taking about five minutes this gives you ample time

to decide which game to play. For the next stage a tape counter is a definite asset. As you "RUN" the title of your choice the Atom reads it from tape, this to load and play Interlactic — the last game — takes about 21 minutes.

What do you get once loaded? Well, not a lot really. On the reviewed tape Interlactic failed to RUN. An audible test revealed considerable deterioration in recording quality on the last few program blocks.

MOUSKATTACK

Of the two remaining games, House proved to be the most enjoyable. You explore a haunted house for treasures whilst bumping off its inhabitants.

Dungeon has you searching caverns for treasure.

A command word missing from the instructions is EXIT, this transports you from almost any scene in the games without you having to give directions.

Acornsoft's Adventure costs £11.50, which could be spent on a more worthwhile game.

WHERE THE RODENTS RUN RIOT

Larry Barn is a plumber with the Rodent Rooster Plumbing Service who installs pipes throughout the levels of Rat Alley.

This is a maze game and in other games of this type, there is always a catch. In Mouskattack it is giant rats.

They infest the maze causing considerable hindrance to your plumbing activities. As protection against the rats, head office has issued you with two cats and two traps.

The trouble is the traps only hold the rats for a few seconds.

The cats are so scared that they will not even move, but they do scare the majority of the rats.

Unfortunately there are super rats in this maze and these simply eat the cats.

Periodically replacement cats and traps are dropped in the centre of the maze, but if they are not claimed quickly, they are retrieved by head office.

Once you have plimbed one maze completely another maze commences with smarter rats. For every two screens cleared you receive a bonus plumber.

The movement of your plumber is controlled by a joystick.

This game is very difficult as well as addictive making each game a constant challenge.

Mouskattack is available on disc for a 32K Atom from Gemini Electronics and costs £22.95.

ALIENS WILL GIVE YOU THE SHAKES

A huge mother ship, lights flashing, slowly approaches. Suddenly it drops a smaller sencer, which crashes down into the atmosphere with a tremendous boom.

No, it's not a scene from the latest space movie but all part of Shockwave, written for the Tangerine Microfen (Micron) system. It's a game which, although infuriating and tricky, is totally different from any other space game I have yet seen.

You load the program at CUTS speed, then, type G400 to start the game.

The mother ship comes on and once in the middle of the screen starts to drop its alien offspring into stacks down each side of the screen.

Each stack holds five aliens, when the sixth alien enters a stack one drops from the bottom. To make things really hard, you can only shoot the aliens whilst in the stack.

The aliens do not shoot at you, they adopt a kamikaze action. When they drop from a stack, they plummet to the bottom line, where a small shockwave

SHOCKWAVE

spreads out a little way either side, destroying your base if it's within range. Hence the name of the game. The mother ship also drops small saucers at random.

It is important to shoot down these saucers before they reach the bottom line as the shockwaves they generate spread out over the entire base of the screen.

A good strategy is to concentrate on keeping the stacks as empty as possible. Aliens only fall when the stack is full. It is possible to fire a salvo of live shots by keeping the live button depressed until five or more chunky pixels are above your ship. This means that you can be in the middle of the screen to shoot the sencer while your shots are still destroying the aliens in the far right or left stacks.

It is impossible to move and shoot at the same time but this is not too much of a disadvantage because you can fire live shots in quick succession and dash back into hiding.

One criticism is that the controls are not explained anywhere in the program or on the sheet which comes with the program — otherwise very addictive.

Shockwave is available from the Tangerine Users Group, at a members price of £5.62 (non-members pay 25 per cent more) and requires 3K on Tenex.

DOWN TO BASIC

PRESENTATION IS VITAL

In all uses of computers, the presentation of the output is vital. This not only applies to games with a visual emphasis like Space Invaders, but also to business applications such as payroll systems.

In many cases, a lot of the time spent in designing and developing a program will be spent on the presentation of the output. The importance of this aspect of programming causes me to devote this month's article to the extra facilities provided in various versions of Basic to help programmers improve their display of information.

These extra facilities can be divided into two main categories: the extra forms of the PRINT statement provided to allow the programmer to specify precisely where results are to be displayed; and the special graphics statements sometimes available — such as the PLOT statement — which are particularly useful for pictorial displays.

EXTRA PRINT FACILITIES

If the number of characters that can be printed on one line of the screen/paper is N, then you can think of each character position on a line as being numbered from 1 to N (N will vary from one system to another). The TAB function specifies a move to a particular character position on the line. The general form of the TAB function is

TAB(X)

where X may be a constant, a variable or an arithmetic expression. If the function

TAB(6)

were encountered in a PRINT statement, then a move to position six on the line would take place. If X is a variable or an arithmetic expression that takes a non-integer value e.g. X = 14.5, then the integer part of X will be taken as the required position (in this case 14).

The effect of using the TAB function is that printing will continue from the specified position. The statement

```
30 PRINT TAB(3);"FRED";TAB(10);Y
```

 would produce the following output, assuming that Y had the value 1.25.

```
position 1 2 3 4 5 6 7 8
          F R E D
          9 10 11 12 13 14 15 ...
          1 . 2 5
```

The cursor will move to position 3 then print "FRED" in positions 3 onwards; it then moves to position 10 and prints the value of Y in positions 10 onwards.

The reason that the digit "1" appears in column 11 is that whenever a number is printed it is preceded by a minus sign, if it is negative, or a space, if it is positive.

Therefore, position 10 will contain either a space or a minus sign depending upon the value of Y. It is important to remember the space that precedes a positive number as it causes the values to be printed one position further to the right than might be expected!

It is also important to separate the items in the PRINT statement with semi-colons rather than commas when using the TAB function — otherwise you will be mixing up the precise specification of positions in the output line with the ideas of "slapping to the next zone" caused by the appearance of a comma. In many systems, it is in fact possible to omit the semi-colons and obtain the same effect:

```
30 PRINT TAB(3)"FRED";TAB(10);Y
```

The TAB function is particularly useful when printing a table — it allows you to specify the position of

each column. The section of program

```
PRINT
TAB(3);"NAME";TAB(10);"HEIGHT"
75 PRINT
80 FOR I=1 TO 3
85 PRINT TAB(3);N$(I);TAB(10);H(I)
90 NEXT I
```

could be used to output a table with the following format

NAME	HEIGHT
FRED	1.84
MARY	1.62
CECIL	1.97

I have described the effect of TAB(X) as being the printing of the next item in positions X onwards.

It should be pointed out that in some versions the effect would be to print the next item in positions (X+1) onwards — the result being that everything is shifted one position further to the right than in the version I have described.

Some systems also have the statements HTAB and VTAB. These can also be used to specify the required position for printing — however, these appear not as part of a PRINT statement, but as statements in their own right before the appropriate PRINT statement

HORIZONTAL HELLOS

HTAB (horizontal TAB) is similar to the TAB function in that it specifies the required position of the cursor on the output line. VTAB (vertical TAB) can be used to select a particular line on the screen as the next output line. The statements:

```
60 VTAB 10
70 HTAB 15
80 PRINT "HELLO"
```

would cause the word HELLO to be printed on line 10 of the screen in positions 15 onwards.

A number of the microcomputers offer special graphics facilities. These can include such things as special graphics symbols, statements for plotting points and drawing lines and things like selection of colours.

The range of facilities varies greatly and I will, therefore, only cover one of the more common

BY MOIRA NORRIE

statements — the PLOT statement in this article.

Before using the special graphics statements, such as PLOT, it is often necessary to indicate that you wish to enter "graphics mode". For example, on the APPLE II, you can use the statement

30 GR

to set the computer ready for graphical display — the screen will be set up with 40 rows and 40 columns which can be referenced by graphics statements, and 4 lines at the bottom of the screen reserved for text.

It is then possible to select a position on the screen to be "shaded" by use of the PLOT statement:

40 PLOT 20, 10

will cause the small area in column 20, row 10 to be shaded. The APPLE II has colour facilities and it is therefore possible to select a particular colour for shading by using the COLOR statement.

The number of different positions that can be selected will determine the amount of detail that can be produced in a picture produced in this way. The APPLE II system offers two levels of detail — low resolution and high resolution. If the statement

30 HGR

is given, then the high resolution option will be selected. In this case, the area of the screen used for graphics is divided into 280 columns and 160 rows.

Positions on the screen can then be selected for shading by use of the HPGLOT statement, which is similar in use to the PLOT statement. The penalty paid for the increase in the level of detail is the reduction in the range of colours available.

NEXT MONTH

Many inexperienced programmers are baffled by talk of the PEEK and POKE operations. Next month, I will explain the use of these in detail.

In addition, the features of the version of Basic available on the BBC Microcomputer will be outlined.

THE CORE OF THE APPLE SYSTEM

The particularities of the Apple II Basic feature in this month's machine-by-machine breakdown of the language.

VARIABLES:

Variables names can be of any length but only the first two characters are distinguished.

If a variable name is followed by %, it is an integer numeric variable.

ARRAYS:

Can have multi-dimensional arrays.

STATEMENTS:

Can have more than one statement per line using a ":" as a separator.

The form of the IF statement is

<line no.> IF <condition> THEN <statement(s)>

Either a STOP or an END statement can be used at any point in a program to terminate the execution.

The ON statement can be used to transfer to any of a list of line nos, depending upon the value of a given expression

<line no.> ON <expression>
GOSUB <list of line nos.>
<line no.> ON <expression>
GOTO <list of line nos.>

The ONERR statement can be used to transfer to a line no. if an error is encountered

<line no.> ONERR GOTO <line no.>

CLEAR

clears all variables.

DEF FN declares user defined one-line functions.

GET reads a character from the keyboard without displaying it.

POKE writes specified value at specified memory address.

POP causes the most recent subroutine return address to be deleted.

RECALL retrieves an array from cassette tape.

STORE records an array on cassette tape.

WAIT used to suspend program execution.

FUNCTIONS:

ASC returns the ASCII code of the first character in the specified string.

CHR\$ converts code number to character.

FRE returns the amount of free memory space.

LEFT\$ returns the specified number of leftmost characters from a string.

MIDS returns a specified substring.

POL returns current value of specified games paddle.

PEEK value at byte in specified memory address.

POS returns the cursor position.

RIGHT\$ returns the specified number of rightmost characters from a string.

SPC used in a PRINT statement to supply spaces.

STR\$ converts number to character string of digits.

USR calls the user's machine language subroutine.

VAL treats the specified string as a number.

Plus ABS, ATN, COS, EXP, INT, LEN, LOG, RND, SGN, SIN, SQR, TAB, HTAB (horizontal TAB), VTAB (vertical TAB).

GRAPHICS:

Colour graphics facility statements COLOR and HCOLOR.

PLOT C, R plots a "paint" in column C, row R

similarly for HPGLOT C, R in high resolution graphics

DRAW draws shape definitions set up in shape tables.

HLIN draws horizontal lines in low resolution graphics.

VLIN draws vertical lines in low resolution graphics.

ROT sets angular rotation for shape drawn by DRAW

SCALE sets scale size for shape drawn by DRAW.

SCRN returns colour code of specified point on screen.

SHLOAO leads a shape table similar to DRAW but each

paint drawn in the complement of the colour already existing at that point on the screen.

ADVENTURE A type of game in which the player has to take a character role and retrieve a number of treasures or objects by a trial and error process giving instructions to the computer. The player encounters a variety of hazards often taking the form of dangerous monsters wizards and animals

ARRAY A series of items arranged to form a meaningful pattern

BASIC The most widespread computer language which is one of the easiest to learn and is used for programming all microcomputers

BASIC COMMAND MODE When you break into a running program it reverts to Basic command mode i.e. it will wait for new command instructions from the keyboard

BUG A slang term given to a mistake in a computer program which prevents it from working it can refer to a mechanical, electrical, or electronic fault

BYTE A term to measure a number of Bits (Binary digit), usually there are eight bits to a byte

COLOR American spelling used to call colour out of several U.S. computers, e.g. the Apple.

CURSOR A position indicator used by most computers to show where the next character should be entered.

DROP TARGETS Targets on a pintable which retract upon being hit by the ball

GET A Basic command which tells the computer to scan the keyboard and return with either a numeric or string value

GRAPHICS MODE A mode in which the computer can produce graphical characters and displays.

HARDWARE The general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

INKEYS A Basic command which checks the keyboard for input and places it in a string

INPUT Data or information which is fed into the computer

K See kilobyte

KILOBYTE A measurement of memory capacity 1K is equal to 1024 so 8K is equivalent to 8192 bytes

L.E.D. (Light Emitting Diode) Provides a simple display and consists of an electron tube which lights up when electricity is passed through it.

LOAD Instruction which is used in conjunction with a cassette recorder to transfer programs from tape to the computer's memory

MATRIX A rectangular array of numbers subject to mathematical operations.

PACMAN The first ghost in the maze arcade game which has since been recreated in many forms and on many computers. Player takes control of a gobbling creature and eats dots in the maze while avoiding pursuing ghosts.

PLOT To map or draw points on the screen.

RAM (RANDOM ACCESS MEMORY) This is a memory chip which you can load programs and data to and from

RAMPACK A cigarette-case sized pack of extra R.A.M. which plugs onto the back of a Sinclair ZX81.

RUN Basic command word tells the computer to perform the numbered sequence of actions referred to as a program.

SOFTWARE Another name for computer programs. It can also refer to computer documentation

STARTREK A popular computer game based on the TV series of the same name, in which the player takes command of the Starship Enterprise and roams the galaxy, destroying Klingons and investigating solar systems.

STATEMENT An instruction in a computer program

STRING Usually represented by a \$ sign on the computer keyboard, a string is a connected sequence of characters or words, usually placed within PRINT statements

SYNTACTIC ERRORS Typographical mistakes in program lines. Information put in the wrong order, information which conflicts with other information or program lines which refer to other unentered lines.

UART Abbreviation for Universal Asynchronous Receiver Transmitter

VARIABLE A symbol whose numeric value can be changed at all times. It is used when writing programs

A GAMES PLAYER'S GUIDE TO THE ATARI 400/800

Add-ons for playing games are joysticks and paddles, the Aven standards, both costing £13.95.

Software for the 400 comes in two forms, either cartridge or cassette. The latter must be loaded by tape recorder, the former can be plugged straight into the computer. You cannot change the information on the cartridges because they are ROM based and therefore not addressable.

Atari has recently added another software sting to its bow in the form of the Atari Program Exchange (APX). Games from the catalogue can be obtained from Atari, c/o PO Box 59, Alorton Lane, Wembley, Middlesex HA9 1EL.

REFRESH YOUR MICRO FOR 85p.

Do you feel you could get more out of your micro? Perhaps new software would improve things. Or how about expanding with new peripherals or more memory? Maybe you even need to upgrade to a better machine.

Then you can't do without Which Micro & Software Review, a brand new magazine which doesn't dabble in micros, it writes about nothing else.

We'll give you more software reviews (especially in the low-cost field) than any other magazine, with a unique buyers guide to software packages, that is updated every month. We'll tell you what's available for each machine, what's in the pipeline, what's right for you, where to get it, and what it costs.

We'll not stint on hardware coverage either. Not only will we publish the most extensive buyers guide section available but also reviews that take the machines apart. We'll compare cost against performance, point out compatibility problems, what's possible (and what's not), plus our best-buy opinions.

With all this you'll get regular round-ups of new peripherals, literature reviews, and problem pages written by two of the most respected experts in the business.

SECOND ISSUE OUT NOW

WHICH MICRO & SOFTWARE REVIEW THE A TO Z OF MICROS.

I would like to subscribe to the first 6 issues of Which Micro & Software Review. I enclose a cheque for £5.00, payable to 'Which Micro & Software Review'.

We can all help if we care enough...

A special from Educational Computing

Many people regard computers as some form of man-made monster, heralding the advent of an era where machines are the masters of men. The emergence of microcomputers in the mid-seventies has helped to overcome this misguided view of how computers will effect one's lives.

Each month, Educational Computing shows the tremendous advances being made in the enhancement of computers, particularly

micros, as teaching aids. In this annual issue, **Learning to cope — computers in special education**, we look at the marvelous achievements of many very dedicated people working with disabled and mentally-handicapped children.

Tremendous progress is being made in this area, brought about by a mixture of ingenuity, flexibility and determination on behalf of the manufacturers of specially adapted products,

writers of applications software, nurses and teachers putting ideas into practice and the children themselves.

In our annual, we look at the latest developments in special education. You can read about the many fascinating applications of microelectronics in this field, what the people involved think and what the future holds in store. Most important of all, you can find if you can help — even in a small way.

Learning to cope — computers in special education £1.50

Please send me a copy of *Learning to cope — computers in special education*.

You can't get a Home Computer from Texas Instruments under 16 K RAM.

Make the right move into computing with the Home Computer from Texas Instruments. It gives you a large combined RAM/ROM capacity up to 110 K Byte and the ability to expand with a full range of peripherals and software. So as your knowledge of computers increases the TI Home Computer will grow with you.

Just compare the versatility of the TI Home Computer with its price—you'll find it real value for money that will prove to be a good long term investment.

The TI-99/4A is a sophisticated computer designed not only for the beginner with its ease of operation, but also for the professional with its vast computing power through a 16 bit microprocessor. And it simply plugs into an ordinary household TV set.

With its high resolution graphics with 32 characters over 24 lines in 16 colours (256 x 192 dots), 3 tones in five octaves plus noise, and BASIC as standard equipment and options such as other programming languages—UCSD-PASCAL, TI-LOGO and ASSEMBLER—and speech synthesis, you'll find that the TI 99/4A more than compares with the competition. Especially when the starting price is around £200. When you want to solve problems there are over 600 software programs available worldwide—including more than 40 on easy-to-use Solid State Software® Modules.

After all, from the inventors of the microprocessor, integrated circuit and microcomputer, it's only natural to expect high technology at a realistic price.

We'll help you do better.
